Dedicated to:

My Great Grand Father:

Hazrat

SHAIKH ABDUL HAQ MOHADDIS DEHLAVI

(Rahmatullah-e-Alaih)

“In the Name of Allah The Most Compassionate,
The Most Merciful.”

“As regards this Admonition, it is We Who have sent it down, and We Our-self will preserve it.
Qur’an (15:9)

“O man, what has beguiled you concerning your Lord, the gracious, Who created you, fashioned you, proportioned you, and put you together in whatever form He pleased? Indeed not! But you deny rewards and punishments, although watchers have been appointed over you, honorable scribes, who know whatever you do.”
Qur’an (82:6-12)

****

“Whosoever knows himself, knows his Lord.”

“Messenger Mohammad. Peace be upon Him.”

ACKNOWLEDGEMENTS

It is quite fascinating to mention those who took a part small or big in developing a simple exchange of ideas to a complete book.
First and the foremost, I must admit the influence of my homage and fealty with my uncle (Late) Molana Shah Abrar ul Haq Haqqi (R.A), on my thoughts.
Then I would thank my wife Qamar for standing beside me providing much needed isolation and comforts. It took nearly two years to test her patience.
I would like to thank PIA Captain Fazaluddin Haqqi whose encouragement played a vital role in this development.
Then my gratitude to prominent writer and translator
Mr. Aleem Ul Haq Haqqi *(author of famous "Ishq ka Ain", "Ishq ka Qaaf" and other 80 books)* who encouraged me and his valuable comments and suggestions are reflected here.
Thanks to Mr. Riaz Akhtar, my PIA colleague for reviewing the text. Thanks to my friend Mr. Nadeem Siddiqui as exchange of Ideas, discussions, his arguments and suggestions were all helpful. Thanks to My son in Law Imad Haqqi who spared his valuable time and examined it minutely. His suggestions were very helpful.
I thank Mr. Akhlaq Nabi Ex. Director Irrigation U.P India, a scholar and writer of religious books, residing in Perth Australia, who helped a lot while checking my text.

I thank Mr. Ali Akbar who also encouraged me and spared his valuable time in reading the manuscript.
I thank my daughter Ruqayya Omer who helped me finalizing the title prepared by myself.
Thanks to Sarah Haqqi who took such interest in this book that kept my motivation high.
Thanks to my son in-law Omer Abrar and thanks to Aamir Alvi & Dr. Bilal Alvi for being much supportive.
My daughter Homaira and Son Nomaan were helpful in a way that realized me the dryness of the topic.
This book addresses a dry subject of Faith & Science and those who could not help me, even though they wanted to, were also helpful in a manner that guided me to be as simple as possible.

I beg forgiveness of all those who helped me one way or the other and whose names I have failed to mention.

Translations of Qur'anic Verses as quoted were picked up from under mentioned websites after cross checking from different reliable sources:

FOREWORD

When Mujeeb ul Haq Haqqi contacted me regarding this book for the first time, I knew nothing about the book or him. And when he showed me his manuscript, I was fascinated… highly fascinated. Its title fascinated me. It still fascinates me and always will. 'Understanding the Divine Whispers'…… what a title! Despite my occupation, I was compelled to read it thoroughly. And it was not difficult. I read it fondly and appreciated it. It is a dry subject, but Mujeeb has narrated his arguments so forcefully and with such an ease and flow of mountain brook, like a work of fiction. And in my humble opinion, it is a great achievement. May Allah accept it as such.

The argument itself is ages old, perhaps the oldest one; is there a god or is there none? Most of the non believers know within themselves and feel at the core of their hearts that they are wrong, because they understand the divine whispers echoing in the deepest wells of their existence. And the divine whispers in the outer

world are so loud that one cannot deny these rationally.

So the title of this book is not just fascinating, it is inspiring, inviting, forcing us to think, to ponder, to look within everything and beyond everything. For example look at the air, which is essential for life. It has more tones than the orating animals….. us the human being.

The divine whispers are not only audible, but visible too. Look at the clouds, whispering, showing us that there is rain to come. But those who do not want to listen to the divine whispers, which are spread in front of their eyes and within themselves, cannot hear these, because they do not want to. We can only pray to Allah to show them the path of 'flaah' (welfare). This book is an effort, a prayer for them. May Allah accept it here, in this world and in the hereafter.

I would humbly quote three ayahs from Holy Qur'an here which tell us about the divine whispers.

Qur'an: (41:53) "We will show them Our portents in the Universe and within themselves**,** until it will become quite clear to them that it is the truth. Is it not sufficient as regards your Lord that He is a witness over all?"

Qur’an: (91:7) “And inspired it* (with consciousness of) what is wrong for it (what is) right for it.”

(* The soul as described in Qur’an)

Qur’an: (81:17-18) “And the night when it closeth, and the morning when it breathes.”

But let us not forget that faith and Belief is just the beginning. Deed based on faith counts.

ALEEM UL HAQ HAQQI,

(22 Oct 2013, Karachi)

PREFACE

Since science has created much confusion among youth regarding religion, I felt it imperative to describe my faith and religion from a modern perspective. It is my endeavor to prove Islamic philosophy more logical, sound and truthful in comparison with baseless, directionless and weak modern secular philosophy.

The advancement of science is opening new horizons of thinking and researches. The new discoveries are so fast that old fashioned arguments regarding faith are becoming obsolete. The growing brains of youth are impressed with the artificial shine of western secular values. The youth of the world with secular values are very vulnerable to defend their ideas based on science. In this respect this is our duty to satisfy young generation who accept logic and rationalism about soundness of any faith. Secular and atheists are open minded people and they could be convinced to conceive much stronger and scientific arguments in favour of a logical religion.

I have used commonsense with simple logic to understand mine and other's school of thoughts. I have tried to present my faith Islam, what I understand, from a modern approach. It can be improved as the more we scientifically think in Qur'an the more rational points we get in an advanced and scientific form in support of this Para Scientific and Natural Religion Islam.

I am neither a religious scholar nor a scientist but what I wrote is pure thinking based on logic, science, observations and studies. If I am anywhere wrong, I am open to rectify myself. It is, indeed, an effort to know the *'real reality'* of human stature.

Please be reminded that this book is written purely for the purpose to clarify some misconceptions among nonbelievers, hence is written at the level of pure physical concepts and some terminologies that I used may not be in the line of Islamic philosophy like words Para-Time, Anti-Thing, or (For Allah swt) No-Thing, Infinite Intent and *Allah as 'the author'* etc, but the purpose is to convince a mind by going to that level it understands.

To provide ready references to reader I have quoted from different websites and as

acknowledgement references are mentioned thereby.

Mujeeb Haqqie

1: INTRODUCTION

T
o know true stature of Human in this universe we have to evaluate the reality of life without any doubt. The advancement of knowledge has created a doubtful environment about religious philosophies. Here we honestly try to find the reality about life and universe with open mind and logic. In fact since the existence humanity is in search of the origin of life and universe. The concept of God is present in every school of thought whether it’s Theism, Deism, Monotheism or Polytheism. The philosophies of life and faith took many forms in accordance to new discoveries that influenced or assaulted old established convictions. Still new ideas are pouring in with new discoveries. In respect of changing faiths the influence of modern scientific knowledge is enormous. This influence is so devastating that many religions are on their back foot in defending their philosophies. Some have perished and some have lost their universal status and have shrunk to personal or community levels. On the other hand modern scientific advancement has also created confused situation pertaining to crucial questions of life. Hence it is

necessary to sort out this confusion. To understand human stature in the universe it is imperative to dig out the realities of life without any shadow of doubt. Now is the time to compare old philosophies of life and modern philosophies with scientific arguments based on solid facts and not on speculations and theories.

THE ISSUE:

What exists or present is in fact a reality. The religion itself is a reality that is present in human minds since the existence. As a matter of fact the rivalry between religious circles, scholars and thinkers is an old one but we see a prominent era when gulf between these two segments of society started widening sharply and that was the increase in flow of knowledge during the renaissance. It was all in the west that researches, discoveries and new ideas were pouring in and the West was dominated by Christianity.

When scientists with religious belief were confused about the rationality of some belief about metaphysics they turned from Theism (that asserts God as ever active and present in the affairs) to Deism (that rejects revelation). It was a turning point and since then deviation from the religious belief has taken many shapes. When

more sophisticated discoveries and inventions were achieved there was more confusion as the religion was unable to handle the intensity of physical facts. So people started turning to Atheism as nonbelievers. But the hard rooted religion was not going to give up so easily. The deep rooted thought found escape in the form of Secularism. Thus after accepting the superiority of science the religious people accepted the division of state and religion. Religion shrank to personal and community levels.

New political philosophies emerged to rule the society with new ideas, like freedom of speech, human rights, freedom of press, freedom of religion and democracy. The liberalism and modernism are the reflections of atheism.

THE SOLUTION:

Ancient and older religions failed to deal with dynamics of modern scientific discoveries. Putting religion behind in confusions is the first step toward accepting atheism. Everyone expects the right arguments to be presented pertaining to religious belief. Any religion having the ability to defend its ideology as ultimate and has logical sting to point out the weaknesses of secularism and atheism then surely that religion would be

the ultimate choice of humanity. But the question is:

Is there any religion having this potential?

That we have to find and if there is one then that would rightly be called a Natural or Perfect Religion. If we find that religion having scientific philosophy and belief proven by logic and evidences then that religion would be on authoritative side to guide humanity. That religion can win hearts and minds of freethinkers, moderates and atheists as people accept logic and evidence. If modern science fails to provide vital answers, without any ifs & buts, to the ultimate questions raised by that religion then the moral winner would be religion and not to mention a perfect and scientific religion. Humanity needs leader with transparent and concrete logical ideas and not any genius with confused and variable ideas.

Next we will compare scientific and religious replies to the ultimate questions of life. We will analyze both view points with knowledge, logic and commonsense as to evaluate soundness.

2: SEEKING FREE ENVIRONMENT

T
he beauty of this world is due to the curiosity of human mind to find reason of every phenomenon to his satisfaction that leads to acquiring more knowledge. Since the existence human is in search of viable answers to very basic questions pertaining to life and universe.

EXPLORING IDENTITY:

- Who am I?
- What my origin and destination is?
- What the origin of this universe is?
- What nature is?

The evolution of human mind is the cause for not acquiring a final answer that could satisfy the human in every age. It was religion that taught the morals and told us about a Divine force as our Creator. The flow of knowledge, researches, renaissance and industrial and scientific revolution seems to be turning points where human started giving up confidence in the religious superiority as the only guide for the social behaviors. New discoveries opened new dimensions to think and to find the answers for the basic questions too. Thanks to the flow of

knowledge that no modern philosophy becomes the ultimate solution provider. Even the advancement of science could not provide satisfactory answers. The lack of just thinking and extreme position in the ideas is the cause that neither the religious nor the modern scholars and philosophers are prepared to accept each other agree and to find viable answers. Both are unable to obtain true ultimate answers to the satisfaction of common human. This leads spreading confusions regarding faith and belief.

Science is based on ‘doubts’ whereas the religion is based on ‘faith’. Science starts with refusal unless proved and religion starts with believing without any physical proof. Science deals with physics whereas common religion deals with metaphysics, soul and morals.

Actually there is no justification in any debate between science and common religion as both are limited in the approach in connection to describe the basic questions. No religion could answer the question about who created God to the satisfaction to any scientist. Similarly science failed to answer how ‘nature’ and natural laws are created. Actually Science’s jurisdiction is confined to physics only and it could not enter in the meta-physical era.

In fact scientists take an extreme position while negating any Para-Physical phenomenon. Similarly some of the ancient religious circles may also be wrong while negating scientific discoveries that do not match their unrealistic peculiar religious myth and interpretations.

FREE ENVIRONMENT:

The human are in this state of confusion due to lack of ‘Free Environment’. It is a place outside the phenomenon that is under scrutiny. Unless we have commanding access to get complete information about the phenomenon there would never been an impartial, correct and conclusive survey and analysis rather we may have many question unanswered. Seeking a free environment provides fair chance to survey and analyze a phenomenon without any influence of that over the person or people those scrutinizing it.

Let us take the example of a scientific research complex in a remote area. If we are asked to describe about this complex in detail just sitting inside the premises then we can explain interior physical setup easily, however we cannot explain the working of many peripherals which have

external links as well, with satellite or telecommunication towers installed outside. That Centre might have other connections from outside and that can only be accounted for when we have an access to go out and examine it. If we still describe it from inside it will be incomplete analysis by any standard. Similarly about the architecture, construction, and strengths of the skeleton structure we may not have proper picture unless we move around. In short we may face many ‘we do not know’ type scenario. A transparent and viable description of any phenomenon needs overwhelming and complete access to entire setup including inside and outside.

MODULES OF THE UNIVERSE:

Without human universe is an abstract. We see a clash or a state of disagreement between religion and science in defining our existence. In this world the basic foundation of the environment consists of ‘Light & Things’ that we may call Time & Space too. Outside the universe lies an environment that we may call as ‘Para-Time’ or Anti-Thing.

Science and religion both are part of this ‘Existence & Time’ environment and neither could individually be successful to define this

world perfectly unless they reach a point of agreement. Science is confined to physics and cannot describe any phenomenon containing both Physical and Metaphysical parameters. Religion represents Non-physical side (faith) of human.

To know about the real picture of this universe we have to explore a medium that could take us to that ‘Para-Time’ or ‘Anti Thing’ phenomenon for surveying the universe from outside or provide some metaphysical information coinciding or superseding human knowledge.

The question is that how could we get there?

- Does science have the ability to take us out there?
- Does Religion have that ability?

CAPACITY OF SCIENCE & RELIGION:

Science is incapable of taking human out of the universe. Religion also cannot take us there by physical means but *it somehow provides a link with Para-Time phenomenon outside the universe.* Here religion supersedes science as it deals with metaphysics also.

If religion provides us the required connection from outside of this physical world then we will initially examine and analyze the origin and source of that connection by commonsense, rationalism and logic.

Most religions do not possess potential or knowledge or hints in their scripture which are related to the present scientific discoveries and human advancements, hence are incapable of meeting new scientific challenges. Religion with weaker philosophy and ill ideology cannot sustain the pressure of finding logical, rational and scientific solutions about the basic questions of life while opposing science. But we have to strive find that religion if there is one having required potential.

FINDING HARMONY:

As earlier described that to find complete reality about this universe it is a must that we find a connection with any ‘being’ which might be present outside of this ‘Time’ based environment. If we succeed in finding a compatible clue from outside of our environment that fixes these issues then we may find a point of junction between science and religion and an acceptable ‘living environment’ free of doubts for both. In that case science would describe the detailed physical structure whereas religion would be helpful in describing Metaphysics and Human stature attaining complete undisputed diagram of this universe.

To find that point of agreement between religion and science we have to find an existing Logical and Perfect Religion that can absorb new ideas, and which has the potential to sustain and counter all scientific logic. Hence we may conclude that:

- Any religion that contains a forceful logical base to absorb new ideas, scientific inventions and new local environments created by dynamic ideas would be an ultimate solution provider to human as Natural or Perfect Religion.

3: UNDERSTANDING THE REALITIES

W
ho am I?
This is the question that relates to our expected behaviors in a defined environment. It arises naturally in one's mind when involved in an environment whether at home, at work, at a club, at market or anywhere else.

APPROPRIATE ATTITUDES:

When we are at home our span of action is confined to our responsibilities pertaining to our family. Here we are master and our mindset is like a responsible person to run a setup. When we move toward the office and drive the car, our mindset is like a responsible citizen to abide by the traffic rules. If we breach a law we will be punished and no excuse can be accepted on any pretext as 'ignorance of law is no excuse' that we all know. As soon we enter at our work place all the parameters of responsibility change according to company's code of conduct.

So at office, 'who I am', means that I am a servant or an executive and I am supposed to do some fixed work pertaining to specific responsibilities which creates specific 'state of

mind' as an obedient servant. Hence our state of mind varies according to situations that we define as per our necessity.

MENTAL & MIND LOCKS:

Apart from traditional meaning we can simply define mental and mind locks as per our study here. It is variable system pertaining to our reactions that works in our mind which changes our span of instant actions in different environment.

'Mental Lock': In daily routine we unconsciously accept some reactions as natural and register them without analyzing there outcomes whether right or wrong. Hence these undefined reactions to particular situation some time are harmful but we do not realize. These are mental-locks which are located in our subconscious.

'Mind Lock': A mind-lock is instant and regular action that we consciously suggest to us to follow in a situation. It all depends how clear we are in our mindset while assigning a mind lock. It needs education to elaborate and allocate better 'mind locks'. To be a good teacher, a good citizen, a good father etc we need education and acceptance of related positive behaviors in our minds. If we are doubtful or ignorant about the customs, values and responsibilities we could

falter in our actions. A good person is one who knows and acts in accordance to acceptable proper attitudes.

These are the situations we face in our daily life that pertain to our physical world. But one thing, above all, is clear that in all the situations like at home, at club or at office etc; we would not do anything that is against the law of the country and accepted social code of conduct. Hence there would be different mind- locks working at different levels but all are connected to and in accordance to a broader environment of the country and its laws. At every level we would analyze our action subsequently in accordance to our need as such that we keep in mind our responsibilities as a good citizen of the residing country.

BROADER ENVIRONMENT:

Now we move forward to broader environment of this universe. The more important questions are:

- Are we really good inhabitant of this universe?
- Do we have our entire needed ‘mind locks’ properly defined pertaining to this universe?

For that first we have to explore our reality then we may proceed to understand what our role

should be in the universe. We have to asses and expand the criteria of our present local responsibilities to the 'Broader Environment of Universe' and then secondly we have to find the exact answer of the question about our 'reality' in relation to this universe in a broader spectrum as:

- Who we are?
- Does mankind have some relation with Divine Power?
- Is mankind/human answerable to any Creator?
- Why there is no 'Visible Boss' and His "Controlling System'?
- What is an abstract?

We cannot be good inhabitant of the broader environment of this universe unless we find the correct answers of above mentioned questions. To get logical answers we have to find relation between human and the universe. We have to analyze logic and rationalism of the current stature of human being. In this respect we must have complete information without any doubt.

REALITY OF KNOWLEDGE:

A fish living in deep water would know everything around through water. As long it stays in the environment of water it would not know about

anything at surface and life at land. Similarly human lives and swim in the ocean of knowledge and mysteries! Despite curiosity to explore new dimensions human is still unable to find the frontiers or end of knowledge. Logically as long human is confined to this 'environment of nature' he would understand the phenomena only to the extent of his knowledge acquired. If human succeeds in exploring the 'frontier' or 'the end' of 'universal knowledge' then human would know what is beyond 'universal knowledge' as something.

HUMAN AS AN ABSTRACT:

Normally we do not accept easily an invisible unless proved or judged by our senses. It is easy to negate or refuse to accept an invisible rather to prove its existence. But in this respect an interesting thing is that we do not realize that even:

'WE' all are 'INVISIBLE' and every one of us in fact is an 'ABSTRACT'! How?

To explain this let us take example of 'Microsoft', an international company. Nobody can touch that Company because as name it is an abstract that has a physical appearance in shape of building, material and staff. Suppose a person's name is 'A', and he talks with authority

about “himself’. If we ask him to show ‘his hand’, his feet or any of his body part, he would show that easily, but if he is asked to show himself as Mr. ‘A’. How would he do that? If he points his finger out towards ‘him’ he may be pointing it to one of his body parts like chest or face! But where is actual Mr. A? That means he is also an abstract like Microsoft Company! This proves that every physical thing actually has an abstract side too.

A second scenario, just observe a computer that consists of two major components Hardware and the Software. A computer machine (hardware) is a dead thing unless we install software to operate. As soon we install software the computer turns into a lively thing and starts working. Hence that working computer has two sides, one is physical and the other is non-physical, the abstract one. The software cannot be touched. It has invisible properties.

Let us take practical example of a car. We name it as brand X. When all the parts are assembled it forms a car that is named as X but when dismantled all parts remain visible but X vanishes just because ‘brand X’ is an abstract.

It shows that we are very accustomed with abstracts but when it comes to a divine being the

modern scholars react very strangely. If ‘we’ exist through our body as a physical reflection, then why we argue against other forms of existence that apparently have no body or doesn’t need a body?

Those abstracts might have some different physical appearances still undetectable with human senses and apparatuses made. That applies to the Creator also.

Now some Human modules are to be examined as to evaluate reality.

SOUL:

We are human having a body but an abstract side too. When we say ‘I’ or ‘My’, actually we talk as an abstract ‘entity’, which has a body to act. That abstract side is named as Soul or mind. So body is the hardware and soul is the software and both when combined, construct a Human Being like us**.**

Religious concept of soul is practical that tells that as long soul is there we are alive. When that soul is driven out the body stops working and we say it is dead. Apparently soul is self generating energy device that provides the required energy to every part of our body. We may better say that we are biological “Robot” consist of super-hardware (body) and super-software of unique

kind (soul). We have massive levels of intelligence, the wisdom.

All our actions performed in specific time environment are subject to the absorption, reactions and decision in alliance with five senses and the Brain. All knowledge that we acquire through our brain are ‘Light or Time’ related outcomes. To understand exactly who we are as ‘soul’ we have one choice that to escape from this ‘Time Prison’. For that we have to detach ourselves from our physical side, our body. Here meditation comes to the equation.

EXPLAINING THE SOUL:

Soul is a mysterious phenomenon. Human are divided pertaining to its nature or even its existence. Modern science and related philosophies out right reject its existence. The question is that why this phenomenon stays in our minds? Why we think about it?

As per scientific theories our thoughts are subject to chemical laws which work in our brain. It is scientifically observed that the functions of neuron and other related segments are responsible for a thought to appear. There lays a mystery pertaining to creation of that thought that how it evolves? The phenomenon that provides a connection between a mental initiative

at first place and appearing of a thought is yet to be clarified by science.

Let us examine it with a simple example. A computer or a robot only works if software is installed. No scientist can show that software working. We may dismantle the computer part by part but cannot find that ‘soul’ of computer. Since we know the nature of that software and its related outcome we believe that computer works due to software. A lay man who does not know about modern science would never know how software works. It depends upon our knowledge and the trust in conjunction with that knowledge that provides a solid ground about a belief. It is the ‘faith’ of scientists and learned people that confirms the existence of software in a computer even that is not physically visible. That conviction is accepted by rest of humanity as people observe the physical applications of software with their own experiences. Software is thoughts compiled in writing. What happens when those thoughts are transferred by some means into the hardware?

What makes computer run?

What makes a robot act?

Hardware itself is just a body having sophisticated mechanism of wiring and metals

designed to perform. It is not easy to understand that highly sophisticated point where software merges with hardware and forms an operating computer or a robot. Software and energy, when act together, become the ‘soul’ of computer. Software and energy are invisible but provide ‘life’ to computer. Scientists accept human as ‘biological machine’ then where is its software? Can we understand that highly sophisticated mechanism that runs human body and creates thoughts and emotions, desires and actions? Are we justified in ignoring this phenomenon of soul?
Think over it.

THE BODY:
The unit brick of our body is atom**.** Atoms construct a molecule and human comprises of trillions of molecules. Our body is a combination of organs. Every organ is a masterpiece itself. Every organ has well defined working parameters. All parts are connected in such a way that they have interrelated actions. Among them is the brain, the most comprehensive body part. All the life and action we see around are the outcome of the activity of our brain. It tells us who we are, what should we do, what are our responsibilities. It guides us about many actions

that we may take. It thinks, explore and invent. It generates emotions. We do not have any physical clue how emotions are generated and how our emotions turn into physical reflections. Commonsense suggests that there must be an invisible contact between body and emotions as emotions are reflected on our body. In short we, as an abstract or soul, do not know how brain thinks! We have limited control over some of our body parts but on the other hand we do not have any control on some of our important systems and organs inside us. All body parts react to our decision through the brain. Here we have to think:

- Who has decided that we should not have control on our blood circulation and heart beat?
- Who has decided that we should have partial control on our lungs?
- Who has conveyed our finger to obey the direction from brain?
- Who has directed our brain to follow ‘our’ desires?
- What or who controls the process of birth and death of body cells?
- What or who commands ‘abstract’ cells to be alive and replace dying cells.

- Who directs ‘brain cells’ to live a longer life?

Logically, to perform all above mentioned actions there must be a commander inside our body.

- Who is that?
- Where we have come from?
- What is ‘our’ origin?

To the abstract side we have consciousness, intelligence, wisdom and memory (a tiny part of brain saves loads of information in our life). Now we have to evaluate some invisible important components like consciousness, desire, and energy.

THOUGHTS:

Thought is a fundamental human activity familiar to everyone, but there is no generally accepted agreement as to what thought is or how it is created.

CONCIOUSNESS:

Despite marvelous physical and mental development we are still unable to understand ourselves alone. We do not know where and how our consciousness works. The latest theories about consciousness are mere efforts to explore what brain is?

Quote: Perhaps no aspect of mind is more familiar or more puzzling than consciousness and our conscious experience

of self and world. The problem of consciousness is arguably the central issue in current theorizing about the mind. Despite the lack of any agreed upon theory of consciousness, there is a widespread, if less than universal, consensus that an adequate account of mind requires a clear understanding of it and its place in nature. We need to understand both what consciousness is and how it relates to other, non-conscious, aspects of reality.
http://plato.stanford.edu/entries/consciousness/

It is impossible for scientists to specify what consciousness is and how it evolved because they stuck to notion that there is nothing like soul. They fail to discover and explain any connection between a mind (self) and brain. If, somehow, we scientifically succeed in understanding the working of brain in terms of consciousness even then this understanding would only reveal a high tech parallel Supreme Science present inside the brain. The relation of our body and ourselves as 'mind' or the soul is yet to be explored physically. Scientists are discovering new dimensions in the universe but are unable to understand their own 'mechanism' that how it thinks and take decisions within the parameters of consciousness and how our desire commands our brain to issue an order to our one organ to act alone, like to our finger to pick a thing and how do the fingers interpret the intensity of that action i.e. to hold gentle or stiff.

DESIRE:

- What is a desire and what is its origin inside us?
- Who commands our brain?
- Does brain work by itself?
- Are we the brain?
- Where do ‘we’ live inside the body?

There are questions pertaining to the basic activity of our brains in terms of our ‘desires’. So it would be helpful for us to identify the real point of initiative of ‘desire’. There is no specific scientific answer available that explains a connection of brain with ‘us’. Here scientists and modern scholars wonder blindly in search of some ‘clue’ that could resolve this mystery in terms of physics.

Quote: ‘A 2008 study entitled "The Neural Correlates of Desire" showed that the human brain categorizes any stimulus according to its desirability by activating three different brain areas:”

(Wikipedia-Desire)

(http://www.plosone.org/article/info%3Adoi%2F10.1371%2Fjournal.pone.0003027)

All researches lead to some invisible and undetectable system which is present inside and nothing else.

We observed that there is no conclusive statement available regarding the origin of Consciousness, Desire and Energy. Modern

scientists speculate about probabilities with a predetermined mindset that everything that exists is only physical. They do find physical clue of many strange phenomena but are unable to find the origin of above mentioned observable facts.

ENERGY:

It is the most essential component of this universe that drives the life. Let us find what energy is?

Quote: Energy can be identified with the conservation of physical quantities like charge, linear and angular momentum; it can be identified with interaction of forces.
http://plato.stanford.edu/search/searcher.py?query=energy

'In physics, energy is an indirectly observed quantity that is often understood as the ability of a physical system to do work on other physical systems.' (Wikipedia/ Energy)

Energy: Usable power that comes from heat, electricity, etc.
(http://www.merriam-webster.com/dictionary/energy

These are explanation of a phenomenon and not scientific explanation of the origin of energy.

- Every event in our daily life is subject to consciousness, desire, command and force.

ATOM & LIFE:

Every living cell has a built-in-energy system and every atom has a self generating energy system inside but no scientist could tell exactly where

that energy comes from. Yet we don't have any apparatus to detect any desire in the electron that compels it to revolve around nucleus. Hence a logical conclusion might be existence of a kind of *'alien consciousness'*, which could be an invisible property of atom or matter that is still undetectable physically by scientists. But who knows?

For any life there should be a basic triangle of consciousness, desire and servant energy. If any of these is missing then there would not be a life or motion.

Hence either we have to determine an origin of conscious links between basic components of atom or have to accept an invisible system, external intent presence everywhere around in this universe controlling particles, atom and everything.

THOUGHTS BARRIERS:

There are different levels of thoughts in different people. We rate them stupid, wise or genius. What makes an ordinary mind a wise or genius? A genius is a person with extraordinary talent that pertains to specific field. It depends on the intensity of desire and concentrated thought that makes an expert in a field. It's thinking and organized effort that focus on an objective to

achieve. In other words if a weak mind is properly coached or educated, it would turn into a smart one. If a person likes to make a sport his career and focuses on the sciences of that game he would become master of that game just because he maintained a set pattern of thoughts and endeavors for that game to be a master. But that sportsman cannot think with the mental level of a doctor. He would always think and act masterly in one particular circle.

Scholars and modern scientists endeavor to find physical clues of hidden mysteries of this universe. The more they think the higher rises the orbit of thoughts. Thoughts also have some barriers and that is a limit where human brain stops to reveal further. At that point to lift that barrier we need constant thinking. That focused force of thoughts at time breaks the barrier and we find new dimensions. In other words that concentrated thought changes and raise the orbit of thinking to a higher degree revealing more knowledge.

The problem here is that a person attaining a higher orbit of thinking in one field becomes the prisoner of knowledge of that (orbit) phenomenon. He would go higher and higher in his thoughts acquiring more knowledge but

would remain in a state of predefined pattern of thinking. He would take many things for granted which are out of his research pattern hence would become master of one field of knowledge only.

- This establishes a fact that there is none among us who can establish the fate of mankind by himself alone. Every learned genius is not a master of every knowledge. He or She shares a tiny part of very huge human mental endeavors spread over hundreds of years exploring universal mysteries.

Hence applying this finding to a small group of genius people is justified on the same pretext. They can present a theory but do not have moral right to announce one philosophy as ultimate.

4: REALITY OF HUMAN THOUGHTS

W
e consider our power of imagination as one reality with no frontiers and that we can think in ‘infinity’. In fact we are restricted to think within the framework of this universe hence our imagination, no matter what we think, is limited to this phenomenon only.

ROLE OF HUMAN BRAIN:

The major apparatus that we depend upon regarding our thinking and acquiring a ‘fact’ is our brain. What we see is, as our brain shows us, what we conclude about any incident or environment, good or bad, warm or cold is the final message from our brain to us and that we believe.

Let us take the example of the sense of taste. The sweet, sour or bitter are the accepted results of our actions through tongue and brain that tells us about a characteristic of one substance. According to the scientists, this characteristic of taste that we posses by sense is the result of an evolution. It means that other tastes may exist apart from what we know. Take it the otherwise, suppose if human tongue and brain had failed to

taste sour then we as human would never have known that there is something like ‘sour’.

- Does human posses the highest degree of knowledge?
- Is there any ‘other’ who possesses higher knowledge than human?
- What is outside the frontiers of this Universe?
- Do we have the capacity to experiment and research about this universe by going outside?
- Can we honestly think in totality about what we actually are?

All the philosophies and thinking are being conducted in an environment that is physical, even our brain is physical. We are in a very complex environment covered by physical laws. How can we think about any reality that is outside this physical world or outside the reach of our ‘senses’? So what we think may not be a ‘pure’ one in relation to that abstract world that is out of the reach of our senses.

- We can define a reality in respect to our ability of thinking and in relation to ‘Time and Existence’ factors only that we are confined in.

Now we examine some strange phenomenon around us that we take all for granted without taking proper notice.

LIGHT:

Light is Electro Magnetic (EM) radiation. EM radiation is made up of photons which travel in waves. By definition you cannot "see" these photons but you see other things because of them.

What we conceive is because of Light. Light is the focal point of ‘existence’ around which all the life and matter revolve. It is an invisible ‘thing’. It is an axis on which the system of Time (day and night) revolves. We cannot imagine a world without it. There is a connection between light and our five senses that makes this universe exist for us. This is an amazing and stunning fact of this ‘nature’ that light can show other things but cannot be seen with human eyes. It travels with high velocity. As earlier mentioned this phenomenon (light) is very strange but taken as for granted. Without light there is no day. How we observe a bright ‘day’ is nothing but hitting that invisible light to the dust particles in atmosphere and travelling into our brain through the magnificent system of viewing.

TIME: (NIGHT & DAY)

What time is?

Some scientific definitions of Time:

Quote: Time may just be common currency or unit of motion making the world easier to describe but having no independent existence

Time is an emergent concept. There is a real phenomenon a continuous change through which we live. To understand time we have to understand the mechanism which brings about this continuous change from which our mind creates the illusion of flow of time.

(http://www.timephysics.com/)

Many metaphysicians have argued that neither time nor space can be ultimately real.

(britannica.com/EBchecked/topic/377923/metaphysics/15821/.)

Time is a dimension in which events can be ordered from the past through the present into the future, and also the measure of durations of events and the intervals between them.

Every definition of time is an explanation of a state of experience. We are bound to think in an environment of ‘day and night’ (Time), and to describe the environment in relation to time (an abstract) while we stay in a physical environment. We measure time, in relation to continuous changes around us through our senses.

Time is one of the basic components of this Super High Tech product known as Universe. Time is a sub-product of light. It has infinite

frontiers. Time has different states in relations with space, speed, gravity and with our imagination.

TIME & HUMAN:

A common man describes time in relation to constant changing of day and night. We plan our every coming moment in accordance to running of time without considering its complex precise continuity. Scientists simply explain this phenomenon on the pretext of ‘natural Laws’ (gravity, motion etc.) that creates our huge solar system that forms this ‘Time’ for us. How a system can work without a planner? It is imperative to mention here that ‘natural laws’ of our physical world states that there may not be a system without planning then why our solar system has got the exception?

CLOCKS & WATCHES:

Our brain is the most complex and intelligent physical device known in this universe. We have made watches and clocks to measure time. These clocks may malfunction but the revolving of earth around the sun and the moon around the earth never malfunctioned. Hence it is concluded that a parallel Supreme Science around us, the nature, is more genius.

PRISON OF TIME & MATTER:

Unfortunately every thinker seeking the answer about life normally thinks with a pre-defined frame of mind. *They take every important daily phenomenon of nature for granted.* We accept it as nature because we are prisoner of 'Time and Matter' and we cannot escape this state of mind.

Our daily life and its ever changing parameters pertaining to our home and social life are so tightened up in the dynamics of Time & Things' parameters that we act like a robot to plan our present and future. We spend life responding to different events that keep coming one after another with ever changing time. Without thinking about who runs and control the time with such precision, every single human is bound to act and react within time and matter frame.

We talk about tomorrow, we plan a Sunday or a holiday, we celebrate our birthdays, but who guarantees that time would reach with such precision as we plan. Who can guarantee that "tomorrow" would occur? We seem to be locked up in a 'Time' phenomenon with the sub classes of Day and Night.

History is the witness of this huge fact that time is fixed for the Dawn and Twilight occurrence. If this world is an unplanned phenomenon then why not day and night sequence ever malfunctioned?

Wind blows abruptly, rain falls abruptly, weather changes abruptly in accordance to some ‘natural laws’, then why not the ‘Night & Day’ alternate and change abruptly. Why this phenomenon has different physical Laws?

PHENOMENAL CONFINEMENT:

This is the beauty of this Super Creation that even though the ‘Day & Night’ are the unprecedented sign of this Para-Science we cannot pay proper attention to highly precise phenomena that has a tremendous grip on our thoughts and actions. Only those who try to think constantly about this phenomenon may feel some extra ordinary mysterious feelings about running time. Our minds and thoughts are locked up in an invisible box. We cannot escape from this physical phenomenal confinement. To find reality of life and to escape from this physical orbit which we are prisoners of, we must accept Para-Physical phenomena.

PRECISE SOLAR SYSTEM:

- The earth revolves around the sun with shrinking and expanding orbit hence forming seasons & climates.
- The earth revolves around its axis and half of its sphere faces the Sun hence forming day & night.

- The light coming from Sun shows us a ‘day’.
- The reflection of that light from moon shows us the phases of the moon.
- The moon revolves on its axis and around the earth in immaculately same time.

This describes that how a parallel Supreme Science is behind this marvelous system.

FASHIONED BEHAVIOUR OF SCHOLARS:

The denial of a ‘Super Infinite Intent’ or an ‘Infinite Unseen Being’ by modern scholars is nothing but a fashioned behaviour. If any person would talk about any human made system as a ‘natural one’ then whole of the community of scholar would laugh at him, but what this whole community is doing with this huge super scientific product is also a funny aspect.

HUMAN vs. NATURE:

Human is still unable to make all or “any” device functioning perfectly ‘forever’ then how could ‘nature’ make a perfect system itself?

Is nature conscious?

Is nature wiser than human?

What our commonsense says?

NEGATING GOD:

Science is exploring and explaining hidden ‘knowledge’, whether in the form of physical laws

or some amazing phenomenon around us, but the search of a “truth” by philosophers, modern scholars and scientists, which could negate the existence of one GOD, is far beyond their reach. All scientific knowledge lead us nowhere but to a state of confusion because we are inside ‘Time & Things Bound Phenomena’ and not aware that we cannot analyze correctly unless we break this Time zone or establish a connection from that unknown phenomenon beyond the frontiers of this universe.

If we could find a physical connection between us and beyond the universe, that contains the information about our universe and about that unknown phenomenon then we could start our analysis without hindrance.

TO THINK IN ENTIRETY:

We think minutely but in isolation about an event, an occurrence or a hypothesis and conclude the findings in a limited span we are involved in. But while deriving philosophies of existence one should think in totality. To think in totality means that while researching and deriving a conclusion one should keep in mind that at same moment what the systems are working around and even inside our body and how they are connected.

For example while thinking about Evolution of Human, at the same time researcher should keep in mind and apply that how:

- the day and night are changing with precision;
- the water cycle working;
- seeds are turning into our food;
- oxygen cycle is keeping the balance of oxygen;
- wind is blowing;
- our heart is beating and pumping the blood;
- our arteries are keeping the flow of blood;
- we are seeing and reading;
- we are listening,
- our digestive system is immune to foods that are cultivated outside the body,
- we are alive.

Keeping all available knowledge behind mind and applying logically the impact of so many super systems and physical laws at the time of thinking would make a person realistic. Here realistic means to acquire a complete answer in relation to the phenomena present.

INCREASING BRAIN STRENGTH:

Without going in a debate that how much part of our brain works just take it as a normal organ like others in our body. We know that every

muscle and bone’s strength depends up on how we use them. The exercise increases the strength of every organ, muscle and tissue.

The brains active cells act normally in our daily life and we think at a normal level of intelligence. The exercises pertaining to brain expands the strength of our brain tissues and so the level of thoughts. Researching also exercises mind. The more we think the higher our thoughts climb. We can presume that our mind contains some levels that are inactive unless they are used by thinking. A philosopher’s mind is on a higher level. The upper stories of any building show us a broader area around.

So the methodology that instigates our brains is a friendly one as it helps human mind to grow. Human mind is also like a skyscraper, but normal people reside at the lower floors.

LIMITATION OF RESEARCH:

Thinking, researching and acquiring knowledge gradually mature our minds and expand our span of thoughts. Our thoughts are like trees. Every new idea is a growing plant, the more we think and research this plant grows and turn in to a tree. The longer and deeper the concentration, the higher grows this tree. We can climb and touch the heights of clouds and stars but be

reminded it would be just like one tiny spot on the earth that tree is growing.

A person may achieve loads of information pertaining to one specific department but that cannot be considered as whole knowledge because it reveals mysteries of one specific research only. Hence scientists or scholars who concentrate on physics can guide humanity only in conjunction with their knowledge confined to physics.

AUTHENTICITY OF SCIENTIFIC RESEARCH:

Let us see what science means:

Einstein said, 'scientific research is based on *the idea* that everything that takes place is determined by laws of Nature'!

Science refers to a system of acquiring knowledge. This system uses observation and experimentation to describe and explain natural phenomena. It is to mention here that science takes this complex system of the universe as for granted and declare it as the outcome of 'natural laws' without answering what was before these natural Laws and how those laws were enforced without an authority. Here an interesting logical point arises:

- If this is a 'natural law' that laws usually do not need any generating authority and are

generated naturally then why new natural laws stopped appearing to minimize human difficulties like diseases, sadness and miseries?

Now refer to above Einstein description of science. They take this *Idea* that *'everything that takes place is determined by laws of Nature'* as the base for further investigation. We may observe here that whole chronicle of scientific research has no solid logical foundation but an idea! We need to explain here what idea means:

Oxford dictionary describes it as 'A thought or suggestion as to a possible course of action; (in singular) a mental impression; an opinion or belief'.

FLOATING FOUNDATION:

Hence beautiful and eye catching skyscraper of scientific development is merely a building on a floating ship whose foundation is nothing concrete but imaginary like an idea, a thought, an opinion, belief, mental impression or mental activity! How weak this foundation is, think over it.

Science is a general term and unfortunately has been made hostage by modern scholars. They have captured it and nobody, out of their accepted parameter, could use it.

SCOPE OF SCIENCE:

By definition, science is not a department set to prove or disprove anything. Rather, science is more or less about making hypothesis for observations, and then testing those hypothesis to see if the results support it. If it doesn't, then we can make a new hypothesis to explain one observation, and this cycle can repeat until our results are consistent with the hypothesis.

It is our mistake that we follow science in our nonphysical matters. If you ask scientist about God, he obviously would say that he does not find the physical evidence of God. We should not blame scientists about their stances as they are bound to research under set physical parameters. Anything that is invisible but detected through apparatus, scientists would declare it as ‘physical, because they found a viable proof of that thing.

SCIENCE AS NEW RELIGION:

With crude physical approach science may not guide humanity to a right path. Accepting science as a “new religion’ would create more problems than it could solve. Analyzing the life from a pure physical point would never give us a valid answer about its beginning and end. Presently science is

moving fast and exploring lots of hidden mysteries but confusion prevails.

FORCED LOGIC:

Logic is defined as the study of the principles of correct reasoning. If one set of argument justifies a conclusion then that line of reasoning is applicable to all same events. If one line of reasoning is accepted as a physical fact for a phenomenon then at the same pretext that reasoning may not be rejected for other phenomenon unless we are biased and not prepare to accept facts as they exist. Instead of accepting the limitation of researches confined to physics, scientist using available incomplete data with forced logic to negate religious belief. They interlink all available data to make their philosophies look logical and for that they even create new hypothesis and derive nonsense conclusions in state of idealism. Just take the examples of Evolution, Big Bang and M-Theory.

- How Emotions developed in reverse, like tolerance and revenge and sadness and happiness?
- They explain creation this way. ‘Since gravitational Law is there universe will create ‘itself’ from nothing’!

- To prove spontaneous creation of this perfect universe they bring theory of probability to prove their hypothesis of 'M-Theory' to prove a point that billions of universes created but all perished except this one with perfection.

So philosophers and scientists having predetermined mindset about negating God are just trying to fix things with forced and unjustified logic. In fact modern philosophers are inflexible minded genius using their marvelous knowledge to misguide humanity. A human is put in dangerous risky position pertaining to his/her life hereafter, if that exists.

CONCEPT OF GOD AS NATURAL:

As per modern theories this highly complicated universe is running and developing under independent natural laws that are out of human control. Discoveries in neuroscience reveal even our thoughts are generated by independent chemical and biological laws. To clarify this we can logically conclude that what we think is originated by some laws without our will! This is what modern science tells us. To apply this to the concept of God as one 'remarkable' thought then, as per simple logic, the concept of God in our mind must have been created by some special

natural laws. Interestingly these ‘special thought generating laws’, pertaining to concept of God, are so natural that it does not require extensive effort and study to accept God rather it requires only commonsense to accept God whereas it needs much complex mental efforts to negate a God by any human brain or mind. Apply above modern scientific approach and evaluate what is Natural, Scientific and Logical among following: Accepting ‘The God’, or Negating ‘The God’.
Make up your own mind.

5: FLAWS OF SCIENTIFIC THOUGHTS

L
et us briefly analyze the complexity of this natural environment and the core system of our universe in which we live. It would be imperative to select a standard to understand this huge system. Human as living beings have common sense that prevails in our daily life, anything beyond commonsense is not a simple thing to understand.

Since science presumes that this world has started with ‘no mind behind’, initially we should examine this world through our commonsense. Commonsense is defined as sound judgment based on a simple perception of the situation or facts. The *Cambridge Dictionary* defines commonsense as, "the basic level of practical knowledge and judgment that we all need to help us live in a reasonable and safe way".

APPROPRIATE TOOLS:

While dealing with a machine if we do not have the complete set of tools we cannot assemble or dismantle it. Similarly when we intend to discover the realities of this universe through our mind

and brains with physical parameters and ‘tools’, then we would be involved in a work of understanding and discovering an established mechanism with incomplete toolset. We would be successful to only the extent of our physical observations.

We are still unable to acquire a complete diagram of this universe just because we are not using proper tools to solve the puzzle. We depend on science and that has only physical tools. Since this universe is comprised of physics and metaphysics the unresolved (origin) or intact portions of this ‘mechanism’ need different tools to penetrate or understand it and those tools pertain to metaphysics. As earlier described analyzing a phenomenon while staying inside has its own dynamics and effects on research and thoughts. We have to stay away and detach ourselves temporarily from physical side to counter its effects on the outcome of our study about universe. For that we have to find means.

NATURAL LAWS:

As scientifically explained this universe is under strict control of Natural laws which are described as: that a particular phenomenon always occurs if certain conditions be present. The properties of Natural laws are that they are True, Universal,

Simple, Absolute, Stable, and Omnipotent. The theory about the 'Physical Laws' is that nature developed them at the time of big bang. The concept, about uncounted physical and natural laws being created as 'natural happenings', is illogical as well as difficult to be accepted by our commonsense.

SCIENTIFIC THEORIES:

Physical Laws are 'natural and proven' whereas scientific theories are hypothesis and the work of human brain. A law is superior as compare to theory as law never changes but theories can be changed.

Let us see the soundness of scientific theories on which we build our civilization. The great scientist Stephen Hawking says:

Quote: 'Any physical theory is always provisional, in the sense that it is only a hypothesis: you can never prove it No matter how many times the results of experiments agree with some theory, you can never be sure that the next time the result will not contradict the theory. On the other hand, you can disprove a theory by finding even a single observation that disagrees with the predictions of the theory.'

(http://public.wsu.edu/~busselle/Hawking.htm)

Hence with new contradicting information previous theories could become null and void. So the theory of evolution and other cosmic theories and discoveries might be at the mercy of some

hidden mysteries and dimensions which are yet to be explored.

- If scientists themselves are not sure about future discoveries then how could be they sure about the metaphysics as non-existing?

Here we may conclude that the science and scientific research are the investigations and conclusions ahead of an assumption regarding laws of nature accepted as ever present.

- Scientists do not believe in God but believe in ‘Laws and Forces’ which are also abstract but have physical reflections. Isn’t it nearly the same?

Every person including modern scientist is an ‘abstract’ entity ‘himself’ and cannot show his personality but a physical body. That physical body represents the physical reflection of the abstract side of a person. If we can exist as an entity without proving our ‘personality’ as physically existed then how can we raise question about God? We ourselves are at same page!

- We reveal us as person through our body God reveals His authority through physical creation.

CREATION OF PHYSICAL LAWS:

This universe is very complex environment that all of its parts visible or invisible both are working in relation to each other one way or the other under some fixed laws. In this respect one question arises that why that growth of laws has stopped to a ‘certain’ distance. Mostly Physical Laws are human friendly and assisting human to a glory then:

- Why new laws are not ‘generated’ to make our life more comfortable.
- Why that natural ‘evolution’ is not working in this ‘physical laws’ department to facilitate more?
- Why that friendly ‘nature’ has suddenly become so cruel that it has stopped at a distance and changed a ‘natural’ course of helping human?
- Does ‘nature’ posses memory or a brain?
- If Evolution has slowly reached a place where it is refining the human body, then why the new diseases are appearing?
- Why our internal resistance is not developing as such to kill viruses?
- Is there any evolution in action for diseases? As we see new diseases are attacking human?

- Why there is harmony among these physical laws?
- What is the relation between health and sickness in respect of Evolution?

There may be dozens of similar questions which cannot be answered by modern science despite its sheer knowledge to satisfy a common human. Here science is confused yet.

PARALLEL SUPREME SCIENCE:

Naturally and apparently the origin of our universe seems nothing but a highly and precisely planned program. We have to accept a parallel unseen 'Supreme Science" that is overwhelmingly present and spread all over.

FREE WILL:

Human decision making is very important aspect pertaining to human free will. How much we are free at will? It is an old question for philosophers to answer. But if our behaviour is determined by some fixed laws then how much we are free on our decisions? Here modern science takes an unusual stand.

Quote: 'It is hard to imagine how free will can operate if our behavior is determined by physical law, so it seems that we are no more than biological machines and that free will is just an illusion.'

Stephen Hawking, ‘The Grand Design’

As scientific reality emergence of human thoughts and behaviours are in conjunction with physical laws. But apparently thoughts are abstract and belong to metaphysics thus science cannot explain with authority about any phenomenon that does not belong to physics. Here ‘will’ is an abstract that is very much felt by us but science cannot explain evolvement of feelings. Science could explain only its emergence and application through laws. In fact that metaphysics take a course through physics.

CONFUSION OF SCIENCE:

Science describes our thoughts as result of chemical laws! Hence what we think and act are not our deeds! Then what is the reality of our actions? It may be explained like this that world is ruled by physical laws and human are just a product like robots without any will or desire. Can we agree with this? This stance put human inferior to physical laws. Human are put in secondary category!

It is complexity of arguments in which science is trapped. Science has exposed its weakness of physical thinking. Here they are caught in their own net of logical arguments. The ultimate result

of following a confused idea leads nowhere but to more confusion.

RELIGION CLARIFIES:

In this universe all events are subject to very complex system, as science calls them laws, working around with multiple effects of action and reaction cause and effect. The confusion about free will is cleared by religion it tells that:

- We as soul or mind or personality are free to choose among desires which emerge spontaneously as per the environment or state of our mind that we are involved in, then the physical laws act as per our desire, through our brain's direction to convert it in physical parameters as our actions.

Here Religion resolves our confusion not science.

Henceforth religion asks human to be careful about the deeds. Human would be held responsible as all his deeds and actions are not subject to physical laws but according to his will.

NATURE:

Quote: Nature: The physical world and everything in it (such as plants, animals, mountains, oceans, stars, etc.) that is not made by people.
(http://www.merriam-webster.com/dictionary/nature)

Our universe is defined as the observable (if not explainable) aspects of the cosmos that involve the galaxies, stars, planets, and life that we know.
http://www.astronomy.pomona.edu/Projects/moderncosmo/Sean%27s%20mutliverse.html
'Science describes 'Nature' as equivalent to the natural world, physical world, or material world. "Nature" refers to the phenomena of the physical world, and also to life in general. It ranges in scale from the subatomic to the cosmic. About 'Universe' scientific explanation is that The Universe is commonly defined as the totality of everything that exists, including all matter and energy, the planets, stars, galaxies, and the contents of intergalactic space.
(http://en.wikipedia.org/wiki/Nature)

This is not a scientific definition of nature. It is simply the descriptions of phenomena human are resident of. Scientists take structure and components of nature as for granted and do not tell about the origin or reality of the point of start.

Science starts with doubts. It accepts present physical phenomenon and then tries to dig out its origin by research.

- Why it is difficult to understand the complex universal system around with our commonsense?
- Why nature has not given to the 'Commonsense' a level that every person could understand it easily?

- Why the concept of God is so easy to understand with common sense?

I think that 'Nature' is the enforcement of physical and Non-Physical laws in relation to everything that exists, within the framework of 'time & thing phenomena'.

NATURE AS A GENIUS:

Scientifically we have to take nature as an entity as it works with a mind like human! The question arises that which one is more genius, Nature or Human?

From scientific point of view apparently the nature is much superior to human in knowledge as it has developed simpler and more stable phenomena based on physical laws. Nature exists around us as physical environment. We are completely surrounded by its overwhelming strength and knowledge. The logical and natural question is that:

- Is there any stronger phenomenon beyond nature?

If we analyze the nature we see that it is very simple for a common human to understand the laws of nature, like a common person knows the sequence of weather, rains, winds, crops and water cycle, but the more we try to understand

the laws of this nature the more complex phenomena we face.

That shows a smarter master plan keeping involved human. Human having curiosity and wisdom have a lot to enjoy. We are prisoners of and confined to this Nature.

- Why nature is keen to hide its mysteries?

What about a ‘mind’ or an ‘Abstract Being’ which might be much greater than this whole universe. Do we have any logical ground to reject such premise?

THE BIG BANG & BLACK HOLE:

The Big Bang theory claims that all the mass that created universe was packed in one atom and that was invisible hence there was nothing. But it is against the theory of Black Hole, which says that if matter is compressed to zero size it collapses forever and turns into a black hole!

FORCE:

As per scientific findings there are four forces present in our universe: Gravity, Electromagnetic Force, Strong Force and Weak Force.

The whole saga of this mysterious world is due to these four forces but we would never find any explanation regarding the origin of forces from any scientist whether he is Einstein or Hawking.

Force is defined as the strength or energy exerted or brought to bear**,** cause of motion or change, active power <the *forces* of nature>
http://www.merriam-webster.com/dictionary/force
Science could only explain it like: Force is any influence that causes an object to undergo a certain change, either concerning its movement or direction. Science takes forces for granted too.

THING & NOTHING:
This whole universe is about 'things'. When we say 'nothing', we talk in terms of things. We have a set meaning of 'nothing' within the defined parameters of existence. Before big bang there must be 'something' beyond the parameters of existence. Since we do not know what was there in Para-Existence as Para-thing, no-thing or Para-Being we just conclude that there was nothing. Here we are right within our dictionary.

An atom is nothing for us as we cannot see it. If the universe, as described by scientists, was shrunk in one extremely heavy atom, at the time of big bang, then what was 'before'?

- What is nothing?
- How nothing turns into things?
- What is the origin of matter?
- From where the matter for that Big Bang came?

- What Force is?
- What was that huge force that caused the big bang?
- What was the origin of that force?
- Did that force acted only for once?
- Where that force has gone?
- Did that force change its course of action after the Big Bang.

PARA-EXISTENCE:

Logically our natural thinking pattern tells that before big bang and before the creation of our mind to think about a thing, there might be a phenomenon as Para-Existence and some “Intent” that we cannot understand at the moment. That intent has an influence in our thoughts (that we talk about it). That intent might be a ‘Super Natural Intelligence’ or ‘Supreme Unseen Being’ according to our vocabulary. That Intent built an ‘environment’ of ‘Existence & Nature’. We have been confined to the phenomena of ‘Time and Existence’.

HADRON COLLIDER:

Modern scientists are trying to discover the origin of universe and are spending huge amount of resources to exhibit the ‘Laboratory Big Bang’ to find solution about some mysteries at the time of Big Bang.

Quote: The Large Hadron Collider (LHC) is set for a massive power boost, paving the way for what could be a dramatic follow-up to the discovery of the so-called “God particle”.
(http://www.independent.co.uk/news/science/large-hadron-collider-revamp-promises-massive-power-boost-for-fresh-experiments-9032612.html)
‘The Large Hadron Collider (LHC) is the highest-energy particle collider ever constructed and is considered as "one of the great engineering milestones of mankind……..with the aim of allowing physicists to test the predictions of different theories of particle physics and high-energy physics, and particularly prove or disprove the existence of the theorized Higgs boson and of the large family of new particles predicted by super-symmetric theories.
http://en.wikipedia.org/wiki/Large_Hadron_Collider

- Without commenting on this scientific expedition a logical question arises that if this proposed ‘Artificial Big Bang’ needed intent, huge endeavors and is in wait for a button to be pushed by human then why not the *actual* Big Bang needed an intent, endeavor and a ‘button’ to be pushed?

EVOLUTION:
The modern theory of human existence and development is evolution. Evolution is defined as the process of change in all forms of life over generations. Evolutionary Biology is the study of how evolution occurs.

Apart from extensive research and scientific data acquired, and we must admire that huge research efforts, human evolution has many flaws. I am not in a position to analyze it as an expert but we can focus from commonsense. It is a mere effort to satisfy a confused moderate mind about our beginnings. After all, evolution is not a universal law. It is still the explanation of a complex process and the more it becomes complex the more is the likelihood of a planning. You never know that in future some new discoveries would bring revolutionary ideas giving some new dimensions of evolution of human life.

COMPLEXITY OF PHENOMENA:

Scholars think in isolation and not in totality. They take many factors for granted. Evolution is a good example. They talk about life development in relation to time factor. They explain the theory in terms of billions and trillions of ‘years’. Here they forget that when we say ‘billion years’ we are ignoring that it means that during that ‘time’ this earth revolved around the sun billions and trillions time with such a precision by maintaining its expanding and shrinking orbit, and it revolved on its axis with same precision some 365x billion or trillion time! That moon also

revolved around the earth in its orbit some trillions time. Further an amazing phenomenon of moon orbiting earth is ignored **t**hat the moon, during that period of time, maintained an amazing calculated ratio of its movement around earth and on its axis as such that human cannot see its back side and it always seems still!

It is easy to explain a phenomenon theoretically in a state of idealism to prove a point with calculations and logic, but are we really realistic here?

- Why the solar system follows laws?
- Is moon a mathematician?
- Does our Moon have consciousness or mind?
- Does a body made up of atoms contain consciousness or mind of a kind?
- Why the Physical laws that are holding this phenomenon never faulted?
- If human cannot make a device with assurances of being ‘never’ faulty, then how nature built some alike?

We have to be realistic here and analyze with open mind and in totality.

HUMAN AND APE MISSING LINKS:

A mind with commonsense is unable to understand the conclusions that in the early

stages human-being were apes. Evolution means, in simple, that a thing gradually changed its structure towards a better form.

It means that it starts from stage 1 to 2 and 3 and so on. But logically when a huge change, which is spread over millions of years, is in progress then it should be natural course of change that previous stage gradually disappears. We would certainly observe some visible physical states of continuous change available. But when we compare the apes, chimpanzee and human, we do not find the middle stages of evolution.

- Why the midstream stages of Ape-Human evolution disappeared and formed fossils but the initials are staying alive.

I mean the apes and chimpanzee are here but the stage between chimpanzee and human are gone as fossils! There must have been some people among us with semi human and semi chimpanzee physical characteristics but we do not find any. Why?

To clarify more let us take the example of a growing tree.

From Seed to Tree:

This process of becoming a tree from one seed is also a kind of evolution that tells the storey how a process is completed from a-z as mentioned above. But here you see that there are millions of

trees available to observe with naked eyes of different stages from seed to plant to tree. With Human we see the initial stages present but middle disappeared! What answer modern science has? It accepts like this.

Quote: 'The absence of fossil evidence for intermediary stages between major transitions in organic design, indeed our inability, even in our imagination, to construct functional intermediates in many cases, has been a persistent and nagging problem for gradualist accounts of evolution.' (http://www.creationism.org/articles/quotes.htm)

The evolution is supposed to move towards an independent, a more refined error free development and existence, then why not this evolution eliminated the dependency on food and other elements not controlled by human themselves. So evolution of animal might be one scientific fact present but connecting it with human has many flaws.

CURRENT RESEARCHES:

We must admire the marvelous researches and findings of modern physicists and as human we own them as physical realities. We shouldn't advocate the opposition between the wise people who think and explore, rather to mention the limitations of one's jurisdictions pertaining to specific fields of researches. While studying modern researches pertaining to creation of

universe, its ingredients and peculiar characteristics of matter, it is revealed that it is still an ongoing process without any concrete conclusion but with many diversities and confusions.

Quote: 'Yet Einstein's fabric left a few loose threads that cosmologists have struggled to tie up ever since. For one, general relativity alone cannot explain the observed motions of galaxies or the way the universe seems to expand. If Einstein's model of gravity is correct, around 96 percent of the cosmos appears to be missing. To make up the difference, cosmologists have posited two mysterious, invisible, and as yet unidentified ingredients: dark matter and dark energy, a double budget deficit that makes many scientists uncomfortable. ……

……While other scientists tread softly around the edges of Einstein's theory, hoping to tweak it into compliance, Barbour and a growing cadre of collaborators see a need for a bold march forward. They aim to demolish the space-time fabric that stands as Einstein's legacy and remap the universe without it. This new cosmic code could eliminate the need to invoke dark matter and dark energy. Even more exciting, it could also open the door to the theory of quantum gravity that Einstein was never able to derive.

(http://consciousresonance.net/wordpress)

Fred Hoyle a renowned scientist says:

'The chance that higher life forms might have emerged in this way is comparable with the chance that a tornado sweeping through a junk-yard might assemble a Boeing 747 from the materials therein.'

(http://www.creationism.org/articles/quotes.htm)

‘The notion that not only the biopolymer but the operating program of a living cell could be arrived at by chance in a primordial organic soup here on the Earth is evidently nonsense of a high order.’
Fred Hoyle, the Big Bang in Astronomy, New Scientist, Vol. 92, No. 1280 p. 527
'Because there is a law like gravity, the universe can and will create itself from nothing. (P 180 ‘The Grand Design’ Stephen Hawking)

Above mentioned few references reveal bitter differences pertaining to very basic physical theories. So how can we be sure about a uniform scientific physical theory defining universal mysteries with perfection?

THINGS FROM NOTHING:

The last one among above mentioned references from a great scientist Stephen Hawking is a masterpiece itself as he says that 'Because there is a law like gravity Universe can create itself from nothing’; he describes an impossible as possible!

- Here we have to redefine the meaning of ‘nothing’! If there is ‘nothing’ then there is no law of gravity. If there is law then how could it be ‘nothing’? Gravity is in conjunction with matter and without matter there cannot be any gravity! It creates huge confusion.

This is good example of a mind being stuck in the mire of nature and physics. He can't think beyond physics as that is an illusion for him.

We have observed here many differences among scientist regarding origin of universe and that is obvious as they are in search of physical clues.

- Can we imagine and accept a fist that could be holding whole universe?
- Do we have the ability to measure the force of a Living Being's 'intent' trillions and trillions time larger than the size of this universe?

What argument and knowledge do we have to negate such possibilities that we can imagine.

Two very forceful philosophies, religion and science, are in dispute and quarrel. We have to explore a common platform for a mutual understanding between these two. We have to see what would happen when Science and Religion go together. If it proves to be a natural collaboration then we will find an undisputed natural environment for life on this earth. The core issue to be addressed is can we find a rational environment for human free of disputes in respect of basic questions?

6: RELIGION & SCIENCE

N
ow we would evaluate science and religion in respect of their impact on human thoughts and behaviours. We would assess the chances pertaining to some common ground between these two.

SCIENCE:

Science is the activity of human to understand and describe the existing phenomena through observation, calculation and logic. In other words what a human brain conceives about any component of the environment and confirms one hypothesis in a given parameter with logic and rationalism is science. Science relates to human physical experiences. Term 'Science' is nothing but the human mental efforts to explore, describe and exploit the mysteries of any strange phenomenon detectable by apparatus and our senses.

We might name this huge phenomenon ‘universe’ as a whole bunch of “Supreme-Science"! Scientists and modern scholars are characters lost in the complexity of its knowledge. They are confused and unclear about the realities pertain

to this universe and life and still fail to provide just answers even after achieving sheer amount of knowledge.

RELIGION:

What Religion doing is solving the puzzle of life through spiritual approaches. Religion relates to belief, morals and human behaviours. It teaches about values and responsibilities pertaining to this life. Religion serves as a bridge to reach a common platform between the physics and metaphysics. It provides a link to beyond infinity. By providing this link religion ties down both parts of human life. Accepting this role of religion would eliminate confusions among modern scholars about the ultimate reality of life.

Before proceeding further it must be clarified that this analysis is purely on logical ground without criticizing any religion. I wish to point out that any philosophy which has some grey areas or blind spot might be worthy to study but dealing with the basic and the most important question of human existence is not as simple as to depend on any philosophy which has a semi logical and semi mythical foundation.

Impartial analysis is challenging and the most intelligent human could also be in confusions. We

would proceed with supported logical explanation.

SUPER INFINITE BEING:

The Basic Problem with Scientists and modern scholars is that they do not accept an ‘Unseen Being’. If ‘mind’ is accepted as human part then how can we limit that mind to be associated with beings only that we know. Why there may not be a being greater than universe or greater than infinity. This is rigid approach. On one hand they accept loads of physical laws as established facts without searching their origin but on the other hand they demand physical evidence of God. Interesting thing is that even those ‘laws’ are invisible like god!

If modern scholars accept an ‘Infinite Invisible Being’ governing the universal system and further accept the position of human in accordance to the messages from an ‘outside environment’, or from Unknown Para-Time then we could explore realistic answers and explanations of our ultimate questions. Scientists & philosophers are thinker but their mistake is that they try to verify religion from scientific and physical angle, hence find the religions as ‘illogical’. Religion cannot be verified by science as religion is based on metaphysics and faith.

As earlier described, Science is simply a tool of our physical world that is used to explore the mysteries of this Super Scientific Phenomena, whereas:

- Religion is one especial component of this Super Scientific phenomenon and vital connection between creatures and the Creator. Religion has especial commanding position that it connects phenomena of physics, spirit and Para-time that leads to understand the Creator of the universe.

The origin of the universe is a puzzle that is yet to be resolved on logical and rational basis. To date science has made this issue more complicated for common people. Religions are generally unable to counter scientific arguments regarding evolution, time and space as it is not religion's field to dig out physical mysteries.

Comparing science with common religions as equal competitors is a blunder. Humans are impressed with science and normally they take science on a higher moral ground because science does not lie and only tells what it conceive. We put science on a higher level because of its crude physical, logical and rational approaches. Scientific expeditions commence with an assumption that all physical laws are

there by nature. Beyond this points the scientific arguments, researches and discoveries are marvelous. They can beat any argument pertaining to Divine Creator on physical ground as they outright reject all metaphysical phenomena. Unfortunately they have confined themselves into physical phenomenon of nature only.

7: UNDERSTANDING GOD

S
ince we live in physical era we ought to think within this environment with a predefined state of mind. We take God just like other characters of daily life. We normally try to understand God from physical parameters.

MISCONCEPTIONS:
It is wrong to take God as a part of this whole ‘existence’ (things) based environment. This wrong concept not only misguides common people but philosophers and modern scientists too. In fact we are confined to our senses in relation to existence only but different incidents do tell about presence of strange phenomenon apparently non-existing, but people experience them, like stories about ghosts etc as it appears now and then. That somehow indicates some mysterious presence around us one way or the other. In such cases why nature reacts mysteriously? We should not ignore such incidents on the pretext of mythology. Why such thoughts even appear at first place if our thoughts are generated by chemical laws? Any

mysterious phenomenon retains its status as myth as long it is not physically proved. X-ray had been a ‘myth’ for common people unless proved right. Hence if we do not recognize a phenomenon it does not qualify to be rejected as myth. Same argument applies to the phenomenon of ‘beyond infinity’. Maybe beyond this ‘world’, might be a ‘place’ where ‘Existence’ or ‘To Exist’ would be an alien concept. Be reminded that what is mentioned here as ‘place’ is also a description within the things & existence parameters and with the limitations of our vocabulary. It is just what we could think about a ‘thing’ or No-thing beyond infinity.

REALITY ABOUT CREATOR:

Despite having huge span of imagination human cannot understand the reality about the Creator who is out of this whole scenario. Our Creator is in Para-Time and ‘Anti-Thing’ phenomenon that might be much different from ours. Our environment would be an illusion in respect of Para-Time phenomenon. The easy example is to refer to the relation between the human and a super robot or a super computer. A robot, no matter how much artificial intelligence is provided, can’t understand that physical

phenomena where its ‘Creator’ the Human resides.

PARA-PHYSICAL PHENOMENON:

After observing daily life and studying systems of our environment we may reach to a logical conclusion, that this whole Universe is a “Super High Tech Mega Product” or a Meta-Scientific Phenomenon. All humans and other life are ‘Biological Robots’ designed to live in this environment. Humans bear unique level of Intelligence, the ‘wisdom’. Wisdom explores the hidden technologies and treasures of Physical and Spiritual Laws pertaining to this Meta-Scientific-World. This practical concept would make life more logical, peaceful and comfortable.

What we conclude is subject to what our senses describe. Our senses have limitations in respect of working and are just tools that convey the information to our brain. Our eyes can't see the electromagnetic waves; our ears have a defined and limited ability to listen. What we feel, see or listen is subject to the activity level of our brain too.

Meta-Physics or Para-physical phenomena are those which cannot be detected by a normal working brain. With advancement of knowledge many Para-physical occurrences are captured

through some scientific devices and are now accepted as ‘physical’ like x-ray and radio waves. It shows that there may be many things which are still alien to our senses but exist and yet to be recognized. Here is a question about the ability of our brain.

- Can we increase the ability of our brain to an extent to connect some Para-Physical phenomenon without the help of any scientific device?

If we find a procedure to increase function of our brain then it might show us some unseen things that are present but negate them due to our inability to recognize unless scientific inventions prove them as a fact. Hence between the human and the complete and ultimate understanding of universe, one thing stands as an obstacle, our limited-functioning brain nothing else. Scientists may not agree that our brain has many hidden powers. Apart from this debate one thing is clear that there are some people who claim to recognize and feel some super natural phenomena? It shows that all depends on our way of thinking and belief. If one believes in super natural phenomenon his brain begins accepting the signals from the Para-Physical side.

- Logically more important thing is if there is no Para-Physical phenomenon then human brain should not recognize and show such things to any person with any belief whatsoever as there would be no ‘laws’ or ‘thoughts’ connected with it.

The systems around us and inside us are quite delicate and are interconnected. We do not see any system inside us that works against the set pattern of human development. Our brain is also like a computer that has BIOS or we have a root directory about our creation. The concept of God is also a ‘natural phenomenon’ deep rooted in human minds. If it is not natural then why our brain accepts it right from its growth?

INFINITY & NO-THING

The term ‘Infinity’ is an excuse for our imagination in respect of assigning a number. There is always a number that represents exactly the size of anything measurable. But when our brain exhausts and fail in assigning a number in respect of counting or imagining the size of any phenomenon then we term it as infinity. Anything that is assigned as 'infinity' must have a frontier or border as this is a 'Natural Law' of the universe that everything has a shape and this law is well accepted by all scholars. Hence in other

words infinity can be defined as the frontier or border of our physical approach through our brain.

If we accept that infinity is ‘beyond’ our imagination then it would be illogical to argue that there is nothing beyond our imagination. Hence there might be ‘something’ beyond the frontiers of infinity or in the phenomenon of infinity. Since we think in parameters of ‘things’ we have to define what nothing is. Vacuum is apparently our imagination in respect of nothing as there is no natural vacuum at this earth. In our concept vacuum is termed as absence of anything or it is a no-thing. If we are unable explain parameter of any phenomenon that is beyond our mental approach then it is rational to name it as No-Thing.

GOD:

While we talk about creation, creatures and Creator a common question is asked that:

- When God has created everything then who created God?
- Why can’t we understand God?
- How can we understand God?

UNDERSTANDING GOD:

The concept of God is really hard wired into our brains like a natural phenomenon. Every religion

tells about a divine power that created the universe.

To understand the ‘existence’ of Creator and the Creation, let us take a modern example. We play video games. A programmer or group of intelligent people design a game and put some characters in it and set some rules of rewards and punishments plus a goal to achieve. The game starts and we take the charge of a character and start playing the game in which we fight or kill opponent characters, build something, gain and loose points. We have full authority to command in a given parameter. Let us discuss it more practically. We know that robot and artificial intelligence are order of the day. You cannot reject following future video games that I am going to explain. It could be a physical game that consists of small transparent glass cubic battle field in which some high-tech robot with artificial intelligence are placed. They are programmed in respect of their surrounding that everything is well defined in their brains. The main control of these robots is in hands of a programmer sitting outside a control panel which has a link with every character and other things kept inside the cube. The purpose of the game is that every robot would collect points in respect of

searching and finding some hidden information pertains to that environment.

The game starts and robot start analyzing all the surrounding information and with logical conclusions they start picking up the hidden information. Every robot that picks up information increases its level of intelligence automatically as programmed. They (robots) may choose their own actions ‘right or wrong’. They can fight or they can do anything under the defined parameters. They can try to destroy the whole setup after acquiring some specific information if permitted in the programmed software. To control the game the intelligent programmer puts an extra ordinary (character) robot Mr. X in the game and through that the programmer sets up and change the rules of the game from time to time. That unique robot is given a higher intelligence level to understand the programmers command for new rules to be imposed. Those new rules could be delivered in an electronic form to each character through Mr. X. The rest of the characters are programmed to interact with Mr. X during the game.

We may understand that every action of the robot would be recorded and the right or wrong gains could be decided with the compliance of

rules of the game. That Character Mr. X tells them that those who follow the rules would be rewarded at the end from their Master and those who disobey would be punished. It is also intimated among them that each action of individual ‘person’ would be registered, captured and saved automatically to determine any foul play at the end.

EXPLAINING GOD:

The robots possess a limited defined level of intelligence to think, analyze and take a decision. *They enjoy an ‘existence’ in their ‘mind’.* Keeping in view of present gaming software, whatever described above is possible in near future. We know that International Robotic Soccer Association is working to prepare a ‘robotic team’ that would be contesting human team! Now presuming this game as an example let us move forward.

Logically there would be a ratio between artificial Intelligence of robots and real intelligence of the programmer, just to understand, suppose it might be 1:1Million. Since those characters possess a “Think and Act” level that might be curious about their Creator in accordance to the level of their ‘thinking’ pattern. They cannot imagine any “world outside”. Their

level of thinking has a frontier and beyond is ‘infinity’. They cannot know about the atmosphere in which the programmer is. Their “Existence” for themselves is a ‘Fact’ as they exist in a Time & Space environment of their own i.e. in their ‘nature’. Outside this artificial parameters that ‘nature’ is nothing but an illusion! They are locked up in an environment of ‘Machine Language & Artificial Intelligence’ by their programmer.

- If we keep on expanding gradually that ‘Artificial Intelligence Scenario’ and the Programmer’s intelligence level (that we supposed as 1:1M) to an extent when robots’ intelligence level reaches to one Million then subsequently the level of that programmer’s intelligence would rise to infinity. In both cases creatures (robots) are unable to meet the brilliance of the Creator even they attain the level of 1Million that equals to human as we presumed.

Above scientific example is logical and mathematically correct proving The God beyond the reach of human imagination.

NATURE, TIME & EXISTENCE:

Now come to this ‘real’ world. This world itself is created by an ‘Infinite Unseen Being’! We are

creatures and we have been provided with an environment of Nature with all that required to survive. Here exist millions of creatures with different levels of intelligence. Human posses the best intelligence level among all creatures and that we call ‘wisdom’.

We have been designed as ‘Super Biological Robots’ with higher levels of Intelligence! Existence and Time are the terminologies for this “Environment”. Our Creator is an invisible beyond the scope of our senses. We are locked up in “Existence & Time” phenomenon just as we lock video game characters or robot in the machine language.

- Hence as per our level of understanding the GOD, our Creator, is a Planner of this ‘setup’ that we are placed in. GOD is above this ‘Time & Existence’ phenomenon.

We can now compare it with that of video game example. Either both are logical or both are wrong. Think over it.

THE MESSENGERS:

The Messengers of God are not common human by stature as they were allowed to witness some super human and super meta-physical phenomena. They were chosen to guide humanity as per Lord’s instructions and good deeds to

follow. They were connections between The Creator and the creatures.

To understand the relations among The Creator, Universe, Human, and the Messengers, the best thing, under the circumstances, is to refer to that video game example mentioned previously. A Prophet or Messenger is a connection between creatures and the Creator because at the moment our Creator does not want to reveal Himself physically and test human to utilize the wisdom to recognize Him.

8: FINDING THE SOLUTION

T
o find Para-scientific links from beyond infinity, now we endeavor to find that link or advice related to basic questions to reach a realistic and factual conclusion.

ABSOLUTE REALITY:

We are trapped in the ‘balloon’, of the universe. We think that we are free and dimensions around us are unlimited but that is not the case in reality. This is physical reality not absolute. We think in physical realm only. Since we fail to find any scientific physical evidence clearing all doubts about our confusions we have no choice except to take into account the Para physical aspects too and to find a link that may have relation with that Para-Time we presumed. To reach or find absolute reality we have to find some physical evidences of metaphysical connections from ‘outer universe’ or from ‘Para-Time’ phenomenon. Absolute reality would contain information about physics and metaphysics. But how could we proceed?

- Do we have some clues of outer connections?

We have a hope here that an invisible intelligent ‘Creator’, making a creation having physical and meta-physical parameters would place evidences about Him in his creation as such that they could easily be detectable in the Physical as well as in the Metaphysical phenomena. That evidence is to be found.

PHYSICAL LAWS & AUTHORITY:

Finding physical evidence regarding a supernatural force or a divine creator is a difficult one as every phenomenon is linked with some physical laws. As a matter of fact the physical laws alone, as per their consistency and accuracy, could have lead to a logical conclusion about a lawmaking authority, but modern scholars and scientists could argue, as they do, that laws exist there by nature. Since they have accepted it and taken it for granted and talk beyond it we have to adopt a different approach here. Nevertheless we have a ray of hope here that we can strive to find something extraordinary in connection with universal or physical laws.

PHYSICAL LAW VOILATED:

By studying human history here we find one.

It is an accepted ‘physical law’ that every book has an author. There are millions or billions of

books and literature, each one having an author in compliance of this physical law.

But surprisingly we observe that this physical law pertaining to any book to have an author, had been violated time and again in respect of some scriptures. Those have no name of author. Here we have to find the reason for such violation. We must resolve this mystery that why and how a physical law is broken? These famous scriptures bear no name of author on their faces, more interestingly none of the humans ever claimed to be the author of any of those books!

What are those books?

Who are the authors? Let's investigate it.

SCRIPTURES:

Every religion has scripture and is believed to be from the 'outside of this universe' and more interestingly billions of Human accept this. To find the reality about this claim we can analyze the circumstances in which these books were appeared and preserved. For further investigations we have to pick a book to analyze about the authenticity of its claim about being divine.

THE LATEST SCRIPTURE:

To select one Book among many, we must adapt a normal logical selection pattern. What we

practice as a routine in our daily life is that we prefer the latest edition of every book or the latest version of any software that we intend to use as it contains the most recent updates and changes. It is a normal and rational behaviour. So we apply this here.

QUR'AN & ISLAM:

Applying this rational and logical practice to the most accepted Scriptures we see that the most recent among Holy Books is Qur'an which is nearly 1450 years old whereas the rest are more than 2000 years old. Logically there must be one Creator of this universe and all Scriptures are supposed to be originated from one source. One forceful reason for selecting Qur'an is that it endorses previous famous Scriptures and claims to be among that chain.

- Moreover another logical reason while selecting this book is that Holy Book 'Qur'an', has only one edition as no updated version is ever needed for a true, ultimate or 'final' scripture.

We have now the latest version of divine book as Qur'an and the most updated form of religion 'Islam' based on this scripture for further investigation.

UNIQUE NATURAL PRESERVATION:

The next step is to check the authenticity of the text of Qur’an as an original one. All the previous versions or holy books pertaining to different religions were divine but none has an authentic preserving system as to claim about the original text still intact without human interferences. Only Qur’an has a very strong natural way of preserving the text in the human mind. Only Qur’an proves to be the most compatible scripture with human brains.

SPECIFIC BRAIN ACTIVITY:

Here again refer to ‘natural laws’ that everything that occurs whether natural or by human efforts is governed by some laws. Hence our brain is no exception. We think, memorize and act through some specific procedure. If this brain acts in a strange way at a particular time then that should also be taken into notice as there could have also been a natural law pertaining to specific brain activity.

MEMORIZING:

We observe that kids even of age 4-5 can memorize Qur’an, containing some 600 pages, so easily even it is not their mother language. It is a proven fact that since its revelation Qur’an is always kept memorized by millions of human. We,

normally, do not see people interested in memorizing books of 500 pages in our daily life because it is not normal action of human brain to accept memorize every text with ease. Here we have to examine about this activity of brain as natural or not.

CREATOR & SPECIAL SPICE FOR BRAIN:

We have a hint about Qur'an as an especial spice for human brain. It reveals a natural connection between human brain and Qur'an! Human brain absorbs its text with ease and the memory chamber retains it for lifetime. It seems to be a 'natural law' that human brain would accept the word of its Creator easily as it was will of the Creator to preserve His words for a time deemed necessary. Its words seem to have the same relation with human memory system like the relation between magnet and iron. Its words stick to human memory system. Hence we can conclude like:

- There is a 'physical law' governing and facilitating this especial memorizing of Qur'an.

It is a logical conclusion as per modern theories!

AUTHOR OF QUR'AN:

The nature of every human is to seek admiration for his work. We observe that an author is always

proud to write his name at the title of his book. But with the Holy Book Qur'an we see a totally different thing. No human ever claimed to be its author. Our Creator knows our psychology and to prevent arguments about HIS book as to be written by a human, HE chose a person who spent his life among people for 40 years and as per his deeds he was known as the most 'Honest' and the most 'Truthful 'person. Further everybody knew that He Peace be upon Him was unable to Read and Write. Then what happened that He Peace be upon Him suddenly started delivering some extraordinary text and speeches full of wisdom? Can anybody explain it? It proves that Qur'an is not written by any human but are the words of our Lord revealed to His Messenger Mohammad Peace be upon Him through revelation.

AUTHORITATIVE TEXT:

Can a Human dare to write a book like this?

Every human is hungry of fame and appreciation about his works and achievement. Human have a specific style of writing. They would write a story, a research document, a poem or some text books for the students etc. Every script has its own style of writing. The human would always be humble as he addresses his human colleagues. The scriptures have some different style of text. A

scripture possesses an authoritative style like a Master or a Boss. The accent and commanding tone of the Book tells that no human can address other humans like that.

ATTRIBUTE OF SCRIPTURE:

A scripture must have the information beyond the human span of thoughts and yet as simple as to be understood by an ordinary person. Apart from providing moral guidance a scripture must have the information about our physical and hidden Meta-physical world. Coming to Qur'an, in this book there are many texts that are related to astrology, embryology and some scientific facts that were not known to human at the time of its revelation.

The Divine Text must be in a language rich in vocabulary with multiple meanings as such that the Book would never be outdated. Qur'an possesses this unique characteristic pertaining to its language that none of the languages could ever compete.

This book was revealed through The Messenger Mohammad Peace be upon Him. The allegation about Mohammad Peace be upon Him being author of that book seems baseless as how he knew scientific facts about the creation of Universe for example the balance of universe and beginning of animal life from

water. There are many scientific phenomenon discussed briefly in Qur'an. Due to the level of knowledge of that age nobody was able to reveal, explain and mention these extra ordinary scientific facts then how this information is added to this book. Can anybody find and prove one human author of Holy Qur'an?

UNIQUE PREDICTION ABOUT THE MESSENGER:

For those talking about a human author, Qur'an confirms Mohammad Peace be upon Him as The last Messenger and further declares that Allah has bestowed Him (pbuh) such a respect that he would be praised high and be remembered by human of every age to come. Qur'an guarantees His (Pbuh) praise ever increasing by this:

Qur'an (94:4) "and exalted your renown for you."

Do you notice here The Messenger Peace be upon Him is left at the 'mercy' of generations to come, because there would be no pressure on a person borne in future to remember and praise the Messenger Peace be upon Him? How could a human would say like this as if it would not be fulfilled then the' scripture' would lose its status and perish! But these are the words of The Lord Who knows the future. Hence we see the remembering, praising an asking

peace for Him Peace be upon Him is exemplary in the history of mankind.

This book also contains a challenge to the mankind to write even a portion or a sentence like this! Would any human author ever challenge the rest of humanity? This book amazingly starts with an extraordinary statement, that there is no lie in this book. This shows overwhelming authority.

Qur'an: (2:1-4) "Alif. Lam. Mim. This is the Book: there is no doubt in it. It is guidance to God-fearing people, who believe in the unseen, establish the Salats and expend out of what We have bestowed on them; who believe in the Book We have sent down to you (i.e. the Qur'an) and in the Books sent down before you (Bible & Torah etc), and firmly believe in the Hereafter."

Qur'an: (17:105) "We have sent down the Qur'an with the truth and with the truth it has come down; and O Muhammad, We have sent you only to give good news (to the Believers) and warning (to the disbelievers)"

Since this Book is the last among scriptures it proves its stature by covering all important systems working inside human and around which

are essential for daily human life to exist. In fact it covers all aspect of human life.

QUR'AN ENDORSES PRECEDING SCRIPTURES:
Qur'an (87:16-19) "But you (O men,) prefer the life of this world, although the Hereafter is better and more lasting. The same had been said in the former Books, the Books of Abraham and Moses."
Qur'an confirms preceding scriptures as Divine.

SELF DEFENCE OF QUR'AN:
The Creator of universe has taken the responsibility to protect this book by Himself:
Qur'an: (15:9) "As regards this Admonition, it is We Who have sent it down, and We Ourself will preserve it."
Qur'an: (75: 17-19) "It is for Us to collect it and to promulgate it. But when we have promulgated it, follow you its recital. No, more it is for Us to explain."
History itself is witness that after 1450 years or so not a single word could have been changed in this book. Is not this amazing? To protect it from human malpractices to change it, Allah made this book so compatible with our memory system that even a child of 5 can memorize it. We found no book in the history of mankind having such lively properties to make itself alive? See how it talks

about our basic questions and how it addresses the issues to clear all confusions about life and universe. Can any human even think to talk like this?

Qur'an (67:1-4) "Full of blessings is He in Whose hand is the Kingdom of the Universe, and He has power over everything. Who created death and life that He may try you to see which of you is best in deeds, and He is All-Mighty as well as All-Forgiving. Who created seven heavens, one above the other. You will not see any fault in the creation of the Merciful. Turn up your eyes: do you see any flaw anywhere? Look up again and yet again: your look will return to you, disappointed, wearied".

Who can challenge human to find any fault in the making of universe except the Master Creator?

Apart from Qur'an below is another example of Creator's overwhelming authority on material and span of human imaginations and desires.

On the authority of Abu Dharr al-Ghifari (may Allah be pleased with him) from the Messenger Peace be upon Him is that among the sayings he relates from his Lord is that HE said:

REF: Part of Hadis-e-Qudsi#17 http://www.islamworld.net/docs/40.html (http://www.angelfire.com/ny/dawahpage/qudsi2.html)

'..... O' My servants, were the first of you and the last of you, the human of you and the jinn of you to rise up in one place and make a request of Me, and were I to give everyone what he requested, that would not decrease what I have, any more than a needle decreases the sea if put into it. O' My servants, it is but your deeds that I reckon up for you and then recompense you for, so let him who finds good praise Allah and let him who finds other than that blame no one but himself.'

This also proves the point that we are in a locked room of 'existence' and what we would demand would be confined to this limited phenomenon of matter and within the span of our thinking. I think common sense is the only thing required to judge if a 'human' can talk like this**.**

NO PHYSICAL LAW VIOLATED:

Hence we have found a physical connection that we were in search of. It also confirms as no physical law is broken. That law about author of book exists non-violated but amazingly '*the author*[1] is not human and belongs to Anti or Para-Time phenomenon!

[1] In Islam Qur'an is the reflection of attributes of Allah. Allah is not an author in the sense we treat.

THE BRIDGE:

So two environments related with Physics and Metaphysics shake hand through a physical or universal law. This universal law appears to be the bridge connecting both Religion & Science.

Here humanity is victorious because the universe now appears from here physically and metaphysically as one phenomenon.

This universal law provides the physical and logical proof of ALLAH, The God, as Qur’an is His proven physical reflection.

9: NATURAL RELIGION

T
o explore a viable natural solution that could eliminate confrontation between religion and science, we have found religion Islam as per our investigation the religion to be investigated if it qualifies to be a natural religion.

EVALUATING LIFE & UNIVERSE:

If we consider, like video game, this universe as a mega scientific setup, human being as biological robots and one Divine Programmer present outside of this ‘environment’ of the nature then all the puzzles would be resolved. If this Para-scientific concept of a Divine Programmer proves to right and resolves all the issues about life then we may name it as a Natural Solution, derived through a process of evolution of mind following divine hints.

Old religions surrendered to science because of limitations and illogical approaches pertaining to advancement of human mind and scientific discoveries. The ‘latest’ Religion ‘Islam’, that is under our scrutiny, is well supported by a scripture ‘Qur’an’. It has changed the position of religion in respect of absorption of human advancements with its immense ability to

coincide each natural phenomenon with science and religion accordingly. Islam calls itself not a religion but a ‘way of life’ (*deen*). Islam has the potential to absorb science as its part. No religion can challenge science as Islam does. Islam revealed some scientific realities much earlier than scientists experimented and accepted them, and some theories are still looked in like ‘the time travel’ and matter turning to energy! These have already been mentioned in Qur’an. To resolve its confusions now is time for science to analyze the things from Islamic point of view too.

- Islam is a true code to resolve confusions, both physical and spiritual. Islam is neglected by thinkers in arrogance on the pretext of an ordinary religion. But if we impartially analyze the theme behind Islam we will find here an amazing balance of physics and metaphysics that creates harmony between science and Islam.

ALLAH:

As earlier stated, our Creator or Programmer of this Mega event is out of this Mega Setup. Islam calls The Greatest Creator as ALLAH which means the only to be worshiped and praised. We cannot think about the reality of Allah as we are confined to think about ‘Things’ only and Allah is

beyond things that we earlier discussed in previous chapter about god.

Qur'an: (42:11) 'There is nothing like unto Him . He hears everything and sees everything.'

Quran tells that we cannot know about any phenomenon that belongs to No-Thing. We know Allah with His attributes as told in Qur'an and that's it.

MESSENGER:

To live a standard obedient and peaceful life, example of 'the way of life' of the Messenger Mohammad Peace be upon Him that is spread over a period of 23 years is well preserved. He guided about every event of life. He taught strong positive moral values that start from love and tolerance and contains command for every period of one's life. Since this example covers both physical and Para-physical aspects of life we can say that Islam is not an ordinary religion.

HIGH TECH ERA & ISLAM:

With advancement of science, all other religions are fading out. Their followers are taking refuge in secularism and free thinking. Some have already perished but the natural religion ISLAM and its scripture QUR'AN have the potential to survive as they are made to face this high tech era.

EXPLORING COMMON GROUND:

To explore a common ground for Science and Religion to move forward first we must find points of disagreements. There we can compare both philosophies pertaining to one specific subject to evaluate its logical soundness. We would study prominent scientists' view points and general scientific perceptions and if we find confusion among scientific circles then we would seek the hints from scripture.

- If Qur'an succeeds in resolving the confusion of scientists at critical stages with sound logic then it would be a triumph for humanity. It might help to reach a rational and practical conclusion benefitting humanity. It would provide much needed acceptable rational platform for both to move forward with homogenous state of mind.

“Then do they not reflect upon the Qur’an? If it had been from [any] other than Allah, they would have found within it much contradiction.”
Qur’an: (4:82)

10: THE DIVINE WHISPERS: “AL-QUR’AN”

W
hile studying and understanding the philosophy of Qur’an we would analyze briefly the most essential aspects of human life in the light of this scripture. In this respect we would occasionally compare scientific confusions and related divine hints providing logical explanation under the circumstances. Next we would examine Qur’an in broader spectrum as true and transparent solution provider to humanity.

DIVINE HINTS & SCIENCE:

We would begin with what Qur’an tells us regarding creation of the universe and life. We would compare it with modern scientific discoveries. If we succeed in finding ‘the divine hints’ that match with the latest scientific development then it would be easier to confirm Qur’an as a scripture. We will certainly try finding the point of connection of physics and metaphysics in the light of this scripture. If Qur’an produces rational solutions of our disagreements then a logical ground upon which true ideology of our existence may erect is found.

THE CAUSE OF THE CREATION:
Allah said for Himself: The Hadith.
"I was a hidden treasure, and I wished that I be recognized, and this is why I created."
Qur'an (51:56). "I have not created the jinns and humans except for servitude to (Me)."

REALITY OF THE CREATION:
Qur'an (6:32) "Nothing is the life of the world but a past time and a sport (Game)."
(Please refer to our example of Video game)

ESTABLISHING A SYSTEM:
Qur'an (40:68) "He it is Who gives life and ordains death. Whatever He decrees, He only commands it to be and it is."
The system was developed to obey His intents. The power of intent is such that the system works and produces whatever willed.

UNIVERSAL LAWS:
Qur'an (54: 49) "We have created everything with a destiny"
Qur'an (65:3) "……., Allah hath set a measure for all things."
Much talked about Physical and scientific laws are mentioned here with a divine hint. The measures for everything pertaining to cause, effect and efforts are highly complicated but

properly defined in the metaphysics as every law is a component and controlled from par-time or metaphysics. Qur'an mentions universal laws.

MULTIVERSE:

Qur'an (41:12) "Then in two days He made the seven heavens, and in each heaven He ordained its law, and We adorned the lower heaven with lights and made it fully secure. Such is the design of the One, Who is the All-Mighty, the All-Knowing."

Read this,' *and in each heaven He ordained its law,*

Qur'an tells different laws of nature for different heavens! How many heavens science has discovered yet? Here we find the multiple universes in the offing. Who can predict like this except a Scripture. Qur'an tells that this universe is decorated with light. Hence we may discover others without light! Here science is following Qur'an! Read below.

Quote: At the point of singularity it is agreed that it is impossible to predict physical behavior. This could mean that beyond this point of singularity there may be an entirely new set of physical laws. It is quite possible that after singularity, there may be an absence of such basic forces as gravity, electromagnetism, and the strong and weak nuclear forces.

http://www.astronomy.pomona.edu/Projects/moderncosmo/Sean%27s%20mutliverse.html

'Our universe seems to be one of many, each with different laws. That multiverse idea is not a notion invented to account for the miracle of fine-tuning. It is a consequence of the no-boundary condition as well as many other theories of modern cosmology.
(The Grand Design, Stephen Hawking, Page 209)
The structure of the multiverse, the nature of each universe within it and the relationship between the various constituent universes, depend on the specific multiverse hypothesis considered.
(http://en.wikipedia.org/wiki/Multiverse)
Here Qur'an is one step ahead of science! Qur'an discloses but science is about to discover.

HUMAN CREATED TO WORSHIP:
Qur'an (51:56) "And I did not create the jinn (jinni) and mankind except to worship Me".
It is obvious even human like the obedience of the people under them. We like praise as it is natural. If we make or manufacture a thing we need complete control. We do this as we descend these attributes from our Creator as mentioned in Qur'an. Hence it becomes a forceful physical law that influences human behaviours one way or the other. So by our standards it is logical.

THE BIG BANG:
The Big Bang itself is a scientific theory, and as such stands or falls by its agreement with observations. What important is that Quran says

Allah created the universe from nothing. See what a great scientist says:

"Because there is a law such as gravity, the universe can and will create itself from nothing."

(http://www.theguardian.com/science/2010/sep/02/stephen-hawking-big-bang-creator)

Anyway Qur’an is not silent about the beginnings:

Qur’an (21:30) Have not those who disbelieve known that the heavens and the earth were of one piece, then We parted them, and we made every living thing from water ? Will they not then believe?

Make up your own mind.

HEAVENS & HUMAN:

Qur’an (40:57) “Assuredly the creation of the heavens and the earth is greater than the creation of mankind; but most of mankind know not.”

Qur’an (79:27-29) “Are you (O’ Human) harder to create, or is the heaven? Allah built it: He raised its vault high and gave it balance, and covered its night and brought forth its day.”

Read again this, ‘He raised its vaults high and gave it balance’! How any person could be able to know this ‘balance’ of universe which contains trillions and trillions of heavenly bodies? This fact is recently revealed about this universe that it is

much complicated in its structure than Human. The balance is highly précised in the universe. The planets, stars are hanging and orbiting with precision. The new discoveries show that the above statement is unchallengeable. Science confirms this statement as fact that universe is much complicated than human. Today human can create from cloning but cannot create a heavenly body!

Another Divine Hint scientifically verified.

BALANCE OF UNIVERSE:

Qur'an (35:41) "The fact is that it is Allah alone Who is sustaining the heavens and the earth from falling into oblivion and if they fall into the abyss there is none to sustain them after Allah. Indeed, Allah is Forbearing and All-Forgiving."

Qur'an (55:5-8) "The sun and the moon adhere to a schedule, and the stars and the trees, all bow down in worship. He raised the heaven high and set the balance."

This is the most amazing divine hint that solves many of our problems pertaining to the mysteries of space. The balance is immaculate in this very huge infinite universe as such a minor difference would destroy it. So how could that any physical law not only creates itself but creates a balanced

Universe? Let us see what science describe this balance.

Quote: *Gravity* is the weakest force in the universe, yet it is in perfect balance. If gravity were any stronger, the *smaller stars* could not form; and, if it were any smaller, the *bigger stars* could not form and *no heavy elements* could exist. Only *"red dwarf"* stars would exist, and these would radiate too feebly to support life on a planet.

(http://www.Qur'anandscience.com/know-your-god/144-the-delicate-balance-in-the-universe.html)

When scientists say that 'natural laws' are perfect they just point out a fact. "The Law Maker" tells that He created that balance and permanent stability that nobody can change. How could human know some 1450 years earlier, except the Creator, that there are loads of inter connected delicate balances in the universe. Isn't it a divine hint?

EXPANSION OF UNIVERSE:

Qur'an (51:47) "We have built the heaven with might, and We it is Who make the vast extent (thereof)."

Qur'an says that this universe is expanding!

Science endorses what Qur'an tells here.

Quote: The galaxies we see in all directions are moving away from the Earth, as evidenced by their red shifts. Hubble's law describes this expansion. (http://hyperphysics.phy-astr.gsu.edu/hbase/astro/hubble.html)

The most precise measurement ever made of the speed of the universe's expansion is in, thanks to NASA's Spitzer Space Telescope. Space itself is pulling apart at the seams, expanding at a rate of 74.3 plus or minus 2.1 kilometers (46.2 plus or minus 1.3 miles) per second per megaparsec (a megaparsec is roughly 3 million light-years). If those numbers are a little too much to contemplate, rest assured that's really, really fast. And it's getting faster all the time.
http://www.space.com/17884-universe-expansion-speed-hubble-constant.html

This is another proof of Qur'an as Divine because nobody would have thought about it1450 years ago.

FAULTLESS HEAVENS:
Qur'an (67:1-4) "Full of blessings is He in Whose hand is the Kingdom of the Universe, and He has power over everything. Who created death and life that He may try you to see which of you is best in deeds, and He is All-Mighty as well as All-Forgiving. Who created seven heavens, one above the other. You will not see any fault in the creation of the Merciful. Turn up your eyes: do you see any flaw anywhere? Look up again and yet again: your look will return to you, disappointed, wearied."
This is big challenge, showing overwhelming authority and superiority of power and controls over the universe its systems, laws and high

techniques. Human is yet to find any fault. So it proves to be a divine challenge. Here science fails to find any fault yet and Qur'an is victorious.

PATH & WAVES IN THE HEAVENS:

"Wass Samaa e zaatil Hubuk"*

Qur'an (51: 7) "By the heaven full of paths." OR "By the sky of various appearances."

*The word 'hubuk' in the original is also used for the paths and for the waves which are produced on the sand of the desert and the surface of stagnant water by the wind; it is also spoken for the curls in wavy hair. (http://www.englishtafsir.com/Qur'an/51/index.html)

So it can also be explained as,

" By the heaven full of waves."

Here we witness amazing eloquence and articulacy of Qur'anic Arabic that contains changing meanings. This verse reflects a scientific fact that is recently discovered. How could a human say like that some 1450 years ago? Nobody knew about the orbits and cosmic waves and paths present in the heavens but the greatest Creator, WHO Created a language having immense depth as to have several meanings in one sentence meeting the need of the age and even disclosing scientific facts.

THE KEYS

Qur'an (12:42) "HIS are the KEYS of the heavens and the earth."

The Laws that governs the universe are not accessible to Human. So we cannot change the physical laws of this universe. All the universal laws are locked and password protected. The key is with ALLAH. Nobody can change these physical and meta-physical laws. Science is still unable to change any physical law.

THE CREATION OF HUMAN:

Qur'an (38:71-72):"When your Lord said to the angels, 'I am about to create man from clay. Then, when I have fashioned him duly, and have breathed into him of My Spirit, prostrate yourselves before him'."

ALLAH blew into Adam, so we see that human contains some of the attributes that Allah administers as per Qur'an. The advancement of knowledge and its applications have proved that human can perform like creating things even changing the sizes and taste of crops and fruits and even changing the chemistry of human through the knowledge of DNA. So it gives a high stature to human as sub-creator and viceroy.

MOLD OF HUMAN:

Qur'an (95:4) "We have indeed created man in the finest of molds."

Qur'an (23-12) "We created man from an extract of Clay."
Qur'an (32-7) "Who made all things so fine which He created; He began the creation of Human being from Clay."

Modern science is unable to catch that high tech substance that we are made up of. Scientists just try to copy but could not make a real tissue or organ. This remarkable divine signal reveals that human is made up of substances found in earth. Our biology says that we are made up of metal and non metal substances.

Quote: 'The average 70 kg adult human body contains approximately 6.7 x 10^{27} atoms and is "composed of" 60 chemical elements. In this sense "composed of" means that a trace of the element has been identified in the body. However, at the finest resolution, most objects on Earth (including the human body) contain measureable contaminating amounts of all of the 88 chemical elements which are detectable in nearly any soil on Earth. The number of elements thought to play an active positive role in life and augmentation of health in humans and other mammals, is about 24 or 25.'

(http://wp.ds3k.com/composition-of-the-human-body-wikipedia-the-free-encyclopedia/)

Who knew this some 1450 years before? Is it not a clear sign of a Scripture? Here Qur'an reveals a fact that is confirmed by science in near past.

BIRTH OF HUMAN:

Qur'an(76:1-2) "Has there also passed on man a period of the endless time when he was not yet a thing worthy of mention? Indeed, We created man from a mixed sperm drop, to try him, and therefore We made him capable of hearing and seeing."

It refers to origin of every human who shows arrogance. It reminds that we were nothing to remember when we were in womb. The more important thing mentioned about our ability of hearing and knowing. How a clot turned into hearing and knowing. How it gains a life with consciousness. Who is behind this mechanism? Just think. We are a product made to be tested. This is the philosophy of life that binds us to follow rules.

THREE STAGES OF EMBRYOLOGY:

Qur'an (39:6) "He shapes you in your mothers' wombs, giving you one form after the other, under three dark veils. This same Allah (Whose works are these) is your Lord Sovereignty is His. There is no god but He. Whence are you, then, being turned away?"

Qur'an says that human were created in the womb under three dark veils. We learn from the modern biology that, the life in the uterus has

three stages: Pre-embryonic, first two and a half weeks, Embryonic; until the end of the 8th week, and Fetal; from the 8th week to labor.

Quote: "An embryo is the developing offspring during the first 8 weeks following conception, and subsequently the term fetus is used until birth. In many societies' medical or legal definitions, human pregnancy is somewhat arbitrarily divided into three trimester periods, as a means to simplify reference to the different stages of prenatal development. http://en.wikipedia.org/wiki/Pregnancy

Isn't it amazing! How could any human write such medical reality some 1450 years earlier as it was not known then? Who included this in Qur'an? If one has a mind free of prejudice would accept it as a divine hint proving Qur'an from Allah the Only Creator. Here science is a tool to confirm that even science and Qur'an are compatible!

LIFE, AGING & DEATH:

Qur'an (40:67-68) "He it is Who created you from dust, then from a sperm, then from a clot of blood, then He delivers you as an infant, then He makes you to grow up to attain to full strength, then makes you to grow further to reach old age, though some one of you are recalled earlier. This is done so that you may reach an appointed time and may understand the reality. He it is Who

gives life and ordains death. Whatever He decrees, He only commands it to be and it is."

Qur'an describes different form of man's life from childhood to young and to old then finally death. It is a mystery yet to be resolved by modern researchers that why human or life dies.

- What is that that creates cells replacing dead cells but keeps the body alive?
- What controls the aging?
- Why nature failed to produce life that does not die?
- Why that law of aging is so inflexible that does not allow living beyond a certain period?
- Why some cells in brain have longer life?*
- What tells cells to perform different?
- What replaces the dead cells?

Quote: The National Institutes of Health say aging is actually one of nature's least understood processes.
(http://longevity.about.com/od/whyweage/a/Understanding-The-Aging-Process.htm)

The scientists discovered that certain proteins, called extremely long-lived proteins (ELLPs), which are found on the surface of the nucleus of neurons, have a remarkably long lifespan. While the lifespan of most proteins totals two days or less, the Salk Institute researchers identified ELLPs in the rat brain that were as old as the organism.
(http://www.sciencedaily.com/releases/2012/02/120203180905.htm)

‘The exact etiology of senescence is still largely unclear and yet to be discovered. The process of senescence is complex, and may derive from a variety of different mechanisms and exist for a variety of different reasons. (http://en.wikipedia.org/wiki/Senescence)

Qur’an describes the overwhelming control of Almighty over all forms of life. Here Science just wondering.

SOUL:

Qur’an (17:85) “They ask you about "The Spirit."Say," This Spirit comes by the command of my Lord, but you have been given <u>only a little of the Knowledge</u>”

Here Qur’an & Science differ. Science doesn’t endorse soul as detectable. But as religion declares Soul as the most important component of human life.

Soul forms a connection between the physical body and the energy keeping it alive. Qur’an tells that human cannot understand soul as the knowledge passed is little.

- This is core problem where all scientists and scholars are confused and helpless to describe the origin of life in a bunch of molecules. They are unable to detect any clue about a cell being alive. Here Qur’an supersedes the science just because Qur’an

represents and explain a Supreme Science or a meta-scientific phenomenon.

Confusion of scientists is not understandable as all computers work with software. What software is? It is a set of instructions that is run through energy and it makes physical body of computer alive. That software itself is invisible but its courses of functions are described in writing. We can see that instruction on paper but in reality that software is an abstract like soul. We cannot feel that software running computer but working computer itself is proof. Similarly we cannot feel soul but a lively body tells the story. Here is a question for modern scientists that:

- What is the difference between software and soul?

In fact both are abstract. Science accepts software but negates soul whereas Qur'an tells about that 'Super High Tech' invisible component as soul that makes a body alive.

Qur'an tells that we human were created as soul.

- This is the missing piece of the jigsaw puzzle of life that is ignored by scientists. Without accepting soul scientists would never ever be able to complete the puzzle of life. History is in wait for that moment when modern scientists would succeed in

detecting and accepting soul as the source of life. That would be time of ultimate triumph of Islam & Qur'an perishing weak and illogical modern philosophies of life.

CONSCIENCE:

Qur'an (75:2) "I swear by the reproaching self."

Qur'an indicates and swear about an amazing characteristic of 'mind' that we call conscience. It is the awareness of a moral or ethical aspect to one's conduct together with the urge to prefer right over wrong. Science is yet to describe this feature that connects our mind with outside world's behaviour in terms of right & wrong and why it is universal? It is the self defense mechanism inside human to counter satanic provocations before any wrong decision.

PAIRS:

Qur'an (51:49) "And We have created everything in pairs: maybe that you learn a lesson from it."

Qur'an (42:11) "He is the Creator of the heavens and the earth, Who made for you pairs from your own kind, and pairs also of the cattle (from their own kind) so as to multiply you. There is nothing like Him in the universe. He hears everything and sees everything."

Qur'an (36:36) "*Who created in pairs all species, whether of vegetable kingdom or of their own*

(i.e., human) kind, or of those things of which they know nothing."

It is a dynamic statement from a scripture declaring everything as created in pair.

"of those things of which they know nothing."

- This statement is multidimensional and huge. In fact it addresses the people to come in future.

It applies to physics and metaphysics or the abstract side of life. This highly important aspect of this universe negates the idea of the natural or 'automatic' development of life (Darwin theory of evolution) because it is impossible that all the things would have a pair or opposite by continuous accidental development spread over a period of billions of years. We observe that there is always a male against female; bad against good; positive against a negative; right against wrong; high against low. Opposites and reciprocals are common. Similarly the electric current runs with positive and negative. Human, animals, birds, insect and trees etc have pairs. Further if we go to the level of atom and particles even there we find components forming and working in pairs. It has been a fundamental and compulsory phenomenon that reminds the

presence of a parallel Supreme Science or Meta-Science and confirms the words as divine.

Further, for every strict and compulsory phenomenon we see exceptions to that law as well which shows the authority of Almighty to create in any manner whatever desired. HE is not bound to create under any law but he creates laws for every creation. So we apparently see life without pair too. Let us examine some latest discoveries and amazing information confirming Qur'an.

DNA: its structure consists of pair of molecules!

Quote: A critical feature of DNA is the ability of the nucleotides to make very specific pairing. A-T and C-G, A is said to be complementary to T (and U) and C is complementary to G.

(http://www.ucl.ac.uk/~sjjgsca/DNA)

'In living organisms DNA does not usually exist as a single molecule, but instead as a pair of molecules that are held tightly together. These two long strands entwine like vines, in the shape of a double helix.''.....Since the DNA backbone is resistant to cleavage and the double-stranded structure provides the molecule with a built-in duplicate of the encoded information.'(http://en.wikipedia.org/wiki/DNA)

Quarks: Inside atoms are quarks with three pairs! Further for quark there is a corresponding anti-quark!

Quote: 'There are six quarks, but physicists usually talk about them in terms of three pairs: up/down, charm/strange, and top/bottom. Quarks have the unusual

characteristic of having a fractional electric charge, unlike the proton and electron, which have integer charges of +1 and -1 respectively.' (http://www.particleadventure.org/quarks.html)

Antiquark: Like all fundamental particles, for each quark, there exists a corresponding anti-quark with opposite quantum numbers; there exists, for instance an $\bar{u}$ or anti-up quark with opposite charge. Mesons are composite particles composed of pairs of quark/anti-quarks. http://astronomy.swin.edu.au/cosmos/Q/Quark

Photons: The unit of light Photon also contains pair in its structure!

We observe that from the tiniest particle that we know as particles and Quarks to Photon to the Galaxies and even this universe has a pair one way or the others.

What proof else human need to accept Qur'an as divine?

We recognize everything with assigning a name.

- Everything 'appears' with a name! So there is always a pair in respect of existence as one is physical side and the other is an abstract like name! Hence it applies from quark to universe. If you dismantle a thing its specific pair (name & thing) disappears but subsequently new emerging form has its own name forming a pair. Just like from a car to its auto part.

THE SKIN:

Qur'an (4:56) "Surely We will throw into the Fire those who have rejected Our Revelations; as often as their skins shall be consumed, We will replace them by other skins so that they may taste the torment in full, for Allah is All-Powerful and All-Wise to enforce His decrees."

It is Qur'an that tells about skin that feels pain. Without it we cannot feel pain. Generally people think that the pain is felt through our brain. Recent discoveries however prove that pain is felt through human skin that contains pain receptors and without which there would be no pain felt. This amazing characteristic was mentioned in Qur'an that science has just verified. So here again the Noble Qur'an surpasses science!

FINGERTIPS:

Qur'an (75: 3-4) "Does man think that We shall not be able to put his bones together? Why not? We have even the power to shape and restore his very finger-tips."

Qur'an pointed out this delicate phenomenon and control of Almighty at a time when nobody was aware of a fact. It was discovered in 1880, that everybody has different fingerprint. Qur'an pointed out this highly unusual phenomenon

because Allah knows at time human would know about it and would prove Qur'an as divine.

DRESS:

Qur'an (7:26-27) "O children of Adam, We have sent down to you clothing in order to cover the shameful parts of your body, and to serve as protection and decoration; and the best garment is the garment of piety. This is one of the signs of Allah; it may be the people learn a lesson from this. O children of Adam, let not Satan seduce you in the same way that he caused your first parents to be driven out of the Garden and stripped them of their garments in order to expose their shameful parts before each other. He and his party see you from where you cannot see them. We have made these satans the guardians of those who do not believe."

Whenever Allah reminds about His any sign, we would see a huge compliment to humanity. Allah says that our dress is his sign that is linked with modesty. How human knew about preparing dress by using cotton and wool? Allah helped him (through thoughts) as mentioned here.

Here we see a point about the evolution theory. If only nature that is running our evolution then why not it created our skins free of dress like the birds have features! Why nature put human

dependant on cotton and wool to prepare dresses. Why not our body created its skin as such not needing any dress and yet modest? In the process of evolution of apes what (thought) made a nude ‘emerging human’ to think about modesty? Why that thought was even created at first place? Why it was needed? Evolutionists have no concrete answer but speculation about why human ignored natural nudeness. Why at that time nature back of? Here Qur’an tells a meaningful reason that why we dress and what is shame and modesty as both are creation.

FOOD:

Qur’an (80:24-32) “Let man consider his food: How We pour water in showers, then split the earth in clefts. And cause the grain to grow therein, and grapes and green fodder, and olive-trees and palm-trees. And garden-closes of thick foliage, and fruits and grasses, Provision for you and your cattle.”

The external system which is working to provide food is very organized for survival of life. Human has nothing to do with the organization of this system.

Qur’an (6:95) “Allah is the splitter of the seed grain and the fruit stone; it is He Who brings forth the living from the dead and the dead from

the living. It is Allah Who does all these things: where, then, are you being misled?"
Qur'an (56:63-64) "Have you seen that which you sow (plant). Is it you who cause to grow it, or are WE the Fosterer."
The people, who consider physical laws as "the cultivator", should think with cool mind that how human survival is so extensively connected with crops. In Qur'an, it is mentioned here as the lifeline of human. Nature, itself, could not evaluate Human needs for survival. Weakness of theory of Evolution, as an independent phenomenon, is reflected here again as it failed to create Human fully dependent on its own. Both, physical laws & evolution may exist as proven fact for some departments but the origin or starting of these laws as 'spontaneous' is irrational**.** In fact both are 'components' of Supreme Science.

SPEECH:
Qur'an (55:3-4) "He is Who created man and taught him speech."
How we speak is the combination of our breath, lungs, vocal cord and tongue! Human speak thousands of languages just because he was guided by his Creator. The Greatest Creator showed HIS infinite authority of creation that is

reflected in the form of thousands of languages and verity of sound of male female that vary with other. It is a high profile gesture to humanity as we recognize each other with our voice too.

TRANSFER OF KNOWLEDGE:

Qur'an (2:31) "He taught Adam all the names of everything."

Here 'names of everything' mean the knowledge about everything that was created in this universe as name is subject to knowledge. Allah told about everything from structure of particles to galaxies. It is all their spread in human brains; we just have to dig it out by study and research. We may also simply describe it like that knowledge is hidden in the universe and we can rediscover it by our endeavors, hence scientific discoveries are part of a programmed Parallel Supreme Science.

THE SUB-CREATOR:

Qur'an (2:30) "And when thy Lord said unto the angels: Lo! I am about to place a viceroy in the earth,"

Qur'an (7:10) "We established you on the earth entrusting you with power and providing you with sustenance, but you are seldom grateful."

Here 'Viceroy' could be explained as Human, having some attributes of Allah, is fully capable of

doing many in allowed parameter. Human are distinct among the creatures as they are bestowed the highest wisdom that none of the other creatures possess. Quran lifts human to the highest pride contrary to science. It is great stature but human is not thankful.

THE ‘TESTIMONY’:

Qur’an (7:172-174)“And, O Prophet, remind the people of the time, when your Lord brought forth from the loins of the Children of Adam, their descendants and made them bear witness about themselves. He asked them, "Am I not your Lord?" They replied, "Most certainly, Thou alone art our Lord; we bear witness to this. This We did lest you should say on the Day of Resurrection, "we were unaware of this thing," or lest you should say, "our forefathers started the practice of shirk before us and we were born after them to their descendants: dost Thou. Then, punish us for the sin that was committed by the wrongdoers?" Behold, this is how We make Our Signs clear so that these people return to the right way.”

The concept of God is present in every religion and in every tribe. It is hard wired in human thoughts. A Creator is a natural understanding of a common Human. It is easy to accept a God then

to negate a God. This confirms the above divine claim.

SCOPE OF IMAGINATION:

Qur’an (32:17) “And no soul knows what joy for them (the inhabitants of Paradise) has been kept hidden."

Hadith e Qudsee (Allah’s Saying) # 37 Allah said:

“I have prepared for My righteous servants (Paradise) what no eye has seen and no ear has heard, nor has it occurred to the human heart.” (Hadiths)

The above quotes are indications about a world completely unknown and out of our range. That is our life hereafter. Here we are reminded about our limited span of senses and imagination. Who could claim like this unless it is divine?

HUMAN ENEMY:

A jealous personality of a higher caliber and unseen strength was also needed for a true exam of human.

Qur’an (7:11-17) “Indeed We planned your creation, then We shaped you, and there We said to the angels, "Bow yourselves before Adam, Accordingly all bowed save Iblis who did not join those who bowed themselves. Allah said. "What prevented you from bowing down, when I

commanded you?"He replied. "I am better than he; Thou created me of fire and created him of clay." Allah said. "Well, get down from here. You have no right to brag here of your greatness. Get out; indeed you are of those who wish themselves ignominy." Satan requested, "Give me respite till the Day when they shall all be raised from the dead." Allah replied, "You are granted respite." He said, "Well for that Thou hast led me into deviation, now I will also lie in ambush for mankind on Thy Right Way. I will come upon them from all sides-froth the front and from the rear, and from their right and from their left: then Thou wilt not find most of them to be grateful".

This concept is also present in every religion. A negative force is always present, to take you off the right track, that is required as test for a successful life hereafter. It is super scientific phenomenon.

ANIMALS:

Qur'an (24:45) "And Allah has created every animal from water: of them there are some that creep on their bellies; some that walk on two legs; and some that walk on four. Allah creates what He wills for verily Allah has power over all things."

It says that animal life started from the water. Science confirms it.

BIRDS:

Qur’an (67:19) “Do they not see the birds above them, spreading their wings and closing them? None is upholding them but the Mercifu1. He it is Who watches over everything.”

Here humans are directed to observe the birds which are creation of a unique kind. They fly and even glide without fluttering their wing. We may conclude that Human idealized birds to dream to fly. Had there not been birds, Human would not have endeavored to fly. Here human were poked to observe birds as Qur’an wanted humans to explore the universe using wisdom and other characteristics bestowed.

COLOURS:

Qur’an (35:27-28) “Do you not see that Allah sends down rainwater from the sky and we bring forth thereby a variety of fruits of different colors? In the mountains also there are streaks, white and red and black, with different hues. And likewise, men, beasts and cattle also have different colors. The fact is that only those of His servants, who possess knowledge, fear Allah. Surely, Allah is All-Mighty, All-Forgiving.”

Here we are reminded about a simple and yet highly complicated phenomenon of colour that everything alive or dead have colour. Colour makes this universe more attractive. Flowers, fruits, cattle, trees, plants, crops, vegetables, mountains, rivers, oceans even human all having different colours. Qur'an mentions it to think and praise the command of Almighty. Interestingly, in reality everything is colourless! Because everything is made up of atoms and atom does not have any colour. When anything becomes 'visible' and colourful it is because it attains a characteristic to absorb and reflect the seven colours of Light in different proportion. Hence when flower 'Rose' absorbs all colours and reflect red we see the Rose as red! Here are questions for Scientists that:

- What makes a bunch of atom (Thing) to absorb and reflect light?
- What makes them sensible as to choose a colour?

How colours evolve? Let us examine.

Quote: 'Color or colour is the visual perceptual property corresponding in humans to the categories called red, blue, yellow, green and others. Color derives from the spectrum of light (distribution of light power versus wavelength) interacting in the eye with the spectral sensitivities of the light receptors. Color categories and physical specifications of color are also associated with objects, materials, light

sources, etc., based on their physical properties such as light absorption, reflection, or emission spectra.' *(http://en.wikipedia.org/wiki/Color)*

Qur'an reminds about this unique phenomenon and science explains its complexity!

SYSTEM OF THE WORLD:

Qur'an (31:20) "See you not how ALLAH has made serviceable to you whatsoever is in the earth and has lavished you with HIS favors both publicly and privately within? Yet there are among mankind who dispute concerning ALLAH, without knowledge or guidance or a scripture giving light."

A well defined system to help human in every department is present to remind the power of a Super Creator who has the grip on every bit of His creation. The oxygen cycle, water cycle, crops, weathers, fruits, livestock and lots of more are available at human disposal. Humans are reminded to think about system inside their bodies and outside which keeps them alive.

We have been provided with dozens of systems inside us related to the functions of our body both with and without our control! We are dependent on Oxygen that is being provided in abundance continuously without any disturbance, we have lungs that work automatically keeping us alive. Our digestive system accepts the Foods from

outside, our heart functions automatically without our consent even resisting the earth's huge magnetic field, our blood flows in our body to keep all organs alive. Humans are just a bunch of trillions of magnificently organized cells.

BACKUP STORES:

Qur'an (15:21) "And there exists no single thing but with US are the stores (sources) thereof. And WE bestow it not down except in well defined measure."

The huge strength and magnitude of command of Almighty is being reflected gradually as after a pair of man and woman were created the built-in-system of reproduction turns that one pair into billions, and still there is no shortage of Oxygen, water and food.

PEN:

Qur'an (96:4-5) "Who Teaches you by Pen. Teaches man that which he knew not."

Human development is due to the flow of knowledge and that knowledge is being allowed to access by Lord as and when HE wishes. The more we strive the more we get. Every human can access the knowledge of his choice but with determination. This is why researchers get as much knowledge as they wish to. The source of transfer of knowledge to next generation initially

was through an amazing tool called PEN. Allah mentions here that He created pen for us and technique of its making transferred to human to retain knowledge.
This shows Allah helps in researches and reveals the hidden mysteries from time to time to humans who try to seek information.

INFINITE KNOWLEDGE:
Qur’an reminds about the volume of knowledge around us.
Qur’an (18:109) “Say: ‘If the ocean were ink (wherewith to write out) the words of my Lord, sooner would the ocean be exhausted than would the words of my Lord, even if we added another ocean like it, for its aid.”
Qur’an (20:10) “HE knows (all) that before them and (all) that is behind them, while they cannot compass HIS knowledge”
This statement not only points out flow of Knowledge from our Creator but the complexity of the creation of this universe too. We may keep on exploring new information and phenomenon but the deeper we go the more complex phenomena become. The reveal of knowledge is subject to our struggle. Human may move around in the universe seeking knowledge but will not find a point where it can be declared that there is

nothing left to explore. In short the more we discover the more we realize we know very little. We as the Sub-Creators (makers) are required to move onwards to achieve prosperity and peace. We are required to explore hidden treasures of physical and spiritual laws to understand, recognize and acknowledge our Creator as to praise Him.

EFFORTS AND RESULTS:

Qur'an (53:39-42) "And that man has only that for which he makes efforts. And that his efforts will be seen. And afterward he will be repaid for it with fullest payments. And that your LORD. HE is the goal."

Work and efforts are main theme of this world. Allah established efforts, works, struggle, and devotions as the essential tools for the progress of Humanity. On the Judgment Day all efforts would be measured to be compensated according to the magnitude of real effort made in this physical world.

REVEALATION OF KNOWLEDGE:

Qur'an (96:5) "Taught man what he did not know."

Allah helps in efforts to invent and explore. The knowledge is spread all over in length and breadth of the universe. As per Qur'an, Allah

helps in discovering new dimensions. A good example is the relation of binary numbers and positive and negative current. The invention of electric current is a small window into a huge horizon of scientific advancement through which human explored the mighty power of computer and electronics. We do not know what remain next to be explored**.**

UNDER STRICT OBSERVATION:

Qur’an (82:9-12) “Nay! But you deny the Recompense (reward for good deeds and punishment for evil deeds). But verily, over you (are appointed angels in charge of mankind) to watch you, Honorable Writers writing down (your deeds), They know all that you do.”

Qur’an (50:16-17) “two scribes, sitting on his right and on his left, are recording everything. He utters not a word but there ' is an ever ready observer to note it down.”

Human is warned that the invisible super high tech video is being prepared for every bit of life spent by unseen guards deputed upon to register every action. We have to understand that a parallel and much advanced technology is there to watch and protect us. Beware! We would not be in a position to deny our deeds, good or bad. We have acquired technology in our physical

world but are still unable to catch this super natural or Meta Scientific technology.

THE REMINDER:

Qur'an (82: 6-8) "O man! What has made you careless concerning your Lord, the Most Generous? Who created you, fashioned you perfectly, and gave you due proportion; in whatever form He willed, He put you together."

The most beautiful and versatile shape of human is mentioned with authority. Are these body parts not remarkable? The body parts, organs and senses, the way they work are unique among all creatures. The gene, the cell, tissues and the genetics of human are of a superior quality too. We are reminded about our reality. Qur'an points out amazing systems inside our body. This authoritative and commanding style could surely be from none other but the real Creator stamping as divine.

THE ADVICE:

Qur'an (103:1-3) "By the Time! Man is surely in loss, except those who believed and did good works, and exhorted one another to Truth, and exhorted one another to patience."

Mankind is reminded, with reference to ever changing 'Time Phenomenon' that they are at loss unless they follow the code of conduct and

guidance. Time is very important component and this reference has huge magnitude. The passage of time is main stream that is holding whole activities of human and nature pertaining to life and existence. All activities revolve around the Time mechanism. It is so mysterious and peculiar that human even residing inside time is unable to pay attention to its origin that how it is fabricated and how it affects the whole economic and social activities.

WARNING:

Qur'an (88: 25-26) "Verily, to US will be their return; then verily, for US will be their reckoning."

This commanding message of Lord to the mankind shows authority that human is helpless against the mighty hold of Allah and cannot run away from its Creator. Human would return and be held accountable for all its deeds. Allah promises to provide an ultimate justice to all.

CONNECTION WITH HUMAN:

Qur'an (50:16) "WE created a Man and WE know what his soul whispers to him, and WE are closer to him than his jugular vein"

It is a hint for spirituality. The deeper we think about Him and worship with pure sentiments our

mind is attuned with an invisible link to have a contact with our Lord.

'Anybody can have a link with Almighty', a statement that is easy to say but difficult to attain. It needs constant efforts in terms of concentration and building the link with Almighty. It is simply linked with every good or bad deed in ones daily life. If it is good then thank Allah and for bad ask mercy. These are the basic mind locks that keep connected. Greater the attention towards Lords stronger the connection attained. There is no doubt about it for history witnesses thousands of saints and "friends of Allah" (The Waliullahs).

ENCOURAGES PONDERING:

Qur'an (30:8) "Have not they pondered upon themselves? Allah created not the heavens and the earth; and that which is between them, except with truth and for a destined end. But truly many of mankind are disbelievers in the meeting with their Lord."

Qur'an (12:105) "How many portents are there in the heavens and the earth, which they pass and pay no attention to them?"

Qur'an invites to think and explore as curious human mind needs logical and rational explanation. This is the way mankind would reach

Allah. The depth of modern discoveries reminds us that the information which are kept hidden are very complex and at a time human would find a physical clue of Almighty in the oceans of knowledge. Only a scripture would encourage human to use wisdom and explore new mysteries.

DIVERSITY OF CREATIONS:

Qur'an (36:79) "He is skilled at every kind of creation.

Qur'an: (16:8) "He creates for you many other things, of which you have no knowledge at all."

Allah creates in multiple dimensions whatever He desires. He created systems as atom from particles, cells from atoms, organs from molecules, trees from seeds ; Fire from tree and further Quarks to Galaxies; Forces to Thoughts; Visible to Invisibles etc. We can't even count. Everything has one unique system. The magnitude of creation is huge.

THE COMPARISION:

Qur'an (79:27-30) "Are you harder to create, or is the heaven? Allah built it: He raised its vault high and gave it balance, and covered its night and brought forth its day."

What we observe today is that universe is much more complex than human. But if 1450 years back a common human was asked to 'compare'

human with the universe how he would have done that? With handful senses he could not see anything beyond his capacity. He would observe clouds, stars, a sun and moon as heavens. While comparing, on the other hand, he would observe the organs of his body like eyes, heart, hands etc. So for him at that time the more difficult to understand in making was the human himself.

- No one could have imagined that universe is heavily complicated comparing to human. But Qur'an revealed it at that time. This statement is great evidence about Qur'an as a scripture, if we really think with open mind.

Science leads us closer to knowing ourselves as living beings because more complex phenomenon reminds us that everything around us in this universe has an origin and a producer. Humans are no exception.

NIGHT, DAY AND THE MOON:

Qur'an (17:12) "And We appoint the night and the day two portents. Then We make dark the portent of the night, and We make the portent of the day sight-giving, that ye may seek bounty from your Lord, and that ye may know the computation of the years, and the reckoning; and everything have We expounded with a clear expounding."

Qur'an (21:33) "And HE it is WHO created the Night and the Day, and the Sun and the Moon. They float, each in an orbit."
Qur'an (39:5) "He has created the heavens and the earth with the truth. He it is Who wraps the night about the day and the day about the night. He has so subjected the sun and the moon that each is moving till an appointed time. Note it well: He is the All-Mighty, the All-Forgiving."

The "Night & Day" and 'Phases of the Moon' are the biggest of the signs of Almighty Allah. The Qur'anic statements about Day and Night are very powerful as every bit of our effort and planning is subject to this 'time flow' that is not under our control at all. Every human's daily routine is in conjunction with this unique ever changing-phenomenon.

- Do we have time to think about it?
- Can modern scientists and nonbelievers stop tomorrow from coming?
- Can anybody change the course of solar system?

Emphasis to ponder on the phases of the moon is very interesting. When Qur'an was revealed there were no knowledge of moon's revolving on its axis. Humans are repeatedly asked to pay attention toward the phases of the moon as the

sign of Lord. In this age we know that this phenomenon has very extraordinary characteristic that it not only revolves around earth but rotate on own axis too. Amazingly both take the same time with precision to millisecond henceforth creating one unique natural mathematical event that we always see half of the moon that is confronting earth. It needs super command to control both the rotations in such a precise way. We all are witness to this at least for our age time. Had there been slightest imbalance or error in this calculation the other side of moon would have appeared.

Quote: The moon is the easiest celestial object to find in the night sky — when it's there. Moon phases and the moon's orbit are a mystery to many. Because it takes 27.3 days both to rotate on its axis *and* to orbit Earth, the moon always shows us the same face. We see the moon because of reflected sunlight. How much of it we see depends on its position in relation to Earth and the Sun. (http://www.space.com/55-earths-moon-formation-composition-and-orbit.html)

- Can a physical law itself create such a balanced mechanism of precision engineering?

Hence another sign of divine hint in Qur’an is proved.

DEATH & HUMAN:

Qur’an (56: 83-85)“If you think you are subject to nobody, and you deem you are right in thinking so, then why don't you restore to the dying person his soul when it has come up to the throat and you are helplessly watching that he is at the point of death? At that time We are closer to him than you, but you do not see Us.”

It is challenge to human to repulse death if he is powerful enough. Here again we are told about the reality of our life as it is bound to end. We are reminded about our limited senses as we cannot see ‘Him’ A dying person witnesses some reality but is unable to tell others as his time is over.

SURRENDER OF HUMAN, PREDICTED:

Qur’an (41:53) "We will show them Our signs in the Universe and inside their-selves, until it will become quite clear to them that it is the truth. Is it not sufficient as regards your Lord that He is a witness over all?”

Qur’an predicts that knowledge (of sciences) acquired would place human in a position that they will have no escape but to accept the ultimate authority of Allah for sure. Science is exploring and explaining universal systems and will recognize Allah with scientific explorations in

respect of metaphysics in future as predicted in Qur'an. Let us wait.

TIMELESS PHENOMENON:

Qur'an (98:8) "Their reward is with their Lord: Gardens of Eden underneath which rivers flow, wherein they dwell for ever. Allah hath pleasure in them and they have pleasure in Him. This is (in store) for him who feareth his Lord."

"wherein they dwell forever. It tells us that after the judgment day there would be" no past and no future but a "Constant Present", in which man would dwell in their respective permanent residency 'forever' whether, filled with fire or full of joy. It would be a phenomenon of NO-TIME. Can science imagine such phenomenon at this stage? As a theory science speculates that time scatters in the black hole. Time is in conjunction with this physical world.

AMAZING TIME ZONES:

Qur'an (22:47) "And indeed, a day with your Lord is like a thousand years of those which you count."

Qur'an (70:40) "The angels and the Spirit (i.e. Gabriel) will ascend to Him during a Day the extent of which is fifty thousand years."

Qur'an hints about different Time zones.

The parameters of time are told in relations to human mindset of that age. We do not exactly know the measure of those days in relation to ours as they might be equal to one billion or trillion as we know the time dilation is a scientific fact. It indicates different phenomena in the heavens containing different parameters of Time. As earlier described under 'Universal laws' that according to Qur'an each heaven has its own laws so as time parameters! Human are familiar with one time parameter that we are in. Qur'an tell us about different periods, as the universe was created in 'six' days, or the judgment day would be like ours 50,000 years similarly a day equals to ours 1000 years mentioned.

Modern science describes time dilation like this:

TIME DILATION:

Quote: *The* slowing of time in accordance with the theory of relativity that occurs in a system in motion relative to an outside observer and that becomes apparent especially as the speed of the system approaches that of light-called also *time dilatation.*

(http://www.merriam-webster.com/dictionary/time%20dilation)

The laws of nature are such that time itself (i.e. space-time) will bend due to differences in either gravity or velocity – each of which affects time in different ways. http://en.wikipedia.org/wiki/Time_dilation

Read again this sentence……. "The laws of nature are such that time itself (space-time) will bend

due to differences in either gravity or velocity each of which affects time in different ways"

- This confirms what Qur'an told about different Time parameters. A Human could not have imagined this 1450 years ago. Hence it is also a Divine Hint.

TIME TRAVEL

This amazing event of speed travel that was mentioned in Qur'an is presently being mentioned in the science fictions and theories of modern science and yet to be achieved. But theoretically it is possible. See what Qur'an describes:

Qur'an (17:1) "Glory be to Him, Who transported His Servant one night from the Masjid-i-Haram to the distant Temple, whose surroundings We have blessed, so that we might show him some of Our Sings: the fact is that He alone is All-Hearing and All-Seeing."

Messenger Mohammad Peace be upon Him travelled from Makkah-Al- Mukarram to Jerusalem and to heavens then back in one night. It is said that when he Peace be upon Him came back time was the same! That shows He Peace be upon Him travelled more than the speed of light as leaving the Time behind. Is not it amazing that it is mentioned in Qur'an. Does not it prove Qur'an as divine? Here one argument is in favour

of Messenger Peace be upon Him that why he would talk about a thing that common human would not accept. This concept is not unscientific. Qur'an tells about a phenomenon that seems very difficult at this moment but possible in future, who knows?

Quote: 'I do believe in time travel. Time travel to the future. Time flows like a river and it seems as if each of us is carried relentlessly along by time's current. But time is like a river in another way. It flows at different speeds in different places and that is the key to travelling into the future. This idea was first proposed by Albert Einstein over 100 years ago." Stephen Hawking.

www.dailygalaxy.com/my_weblog/2010/07/stephen-hawking-time-travel-to-the-future-is-possible.html

It has been theorized that beyond singularity exist tunnels - shortcuts - to other ends of the universe. These "wormholes" could be a solution to interstellar travel, which currently is limited by relativity.

http://www.astronomy.pomona.edu/Projects/moderncosmo/Sean%27s%20mutliverse.html

OATH OF STARS POSITIONS:

Qur'an (56:75-76) "But nay! I swear by the positions of the stars and it is a great oath, only if you knew it."

Here are two very important points to ponder. Human were addressed at a time when they possessed little knowledge about universe. Here human were told about the oath of Star as 'Great One' just because it was a hint for generations to come to confirm this statement by acquiring

knowledge of space and galaxies that science is doing presently.

ALLAH & TIME:

Allah said through his Messenger Peace be upon Him. (Hadiths)

'Allah says, 'The sons of Adam offend Me and say, Woe to time, but they should not say Woe to time. I am time, I alternate the night and the day, and if I willed, I could seize them both.'"

Time is our environment. Life revolves around time. Time is a lively thing in a sense that it is always changing at different places. Every place has a varying schedule of day and night that stretches and shrink with precision under a defined Law. If earth stops and become stand still, time around us will stop moving. Then we wouldn't have changing day and night, weathers and seasons. We wouldn't move and live a normal life instead life would be destroyed. It reflects a fact that all parameters in this universe for us the Human are subject to time and Allah's creation and authority is visible to human through this amazing phenomenon. The only medium that connects the creatures and the Creator is TIME. Hence Allah says that He is Time. This is what I can understand to the extent of knowledge and thoughts I bear.

11: TIME, REAL-REALITY & PARA-TIME

W
hile understanding this universe and its Creator the most important phenomenon that is to be thoroughly analyzed is ‘time’. The second one is consciousness. Time and consciousness are basically two major factors that play critical role in forming one conclusion based on experience.

DYNAMICS OF TIME:

Time is an amazing prison of thoughts and their execution that has surrounded Human overwhelmingly. It has such mysterious dynamics that even the most learned scholar would think and take decision within Time prison without realizing his limitations. All philosophies of life are efforts of human to dig out universal physical realities within a capsule of time. This phenomenon confined human to think within physical parameters whereas the Truth about realities lies beyond physics. To understand the ‘real’ reality we have to break that time barrier that is the main obstacle to understand the metaphysical realities.

- Human are entrapped in Mire of Time.

All worldly events, whether personal or universal, are in conjunction with time flow. This

flow of time creates ever changing environment that human are bound to respond. The dynamics of daily routine is the outcome of this fact and human are busy in responding. Emotions, Desire and actions and reaction construct a circle of responses for every creature to be involved in. Time and Thoughts keep human busy.

We normally research about one phenomenon with limited span of conceiving. We concentrate to a limited extent and ignore other related phenomenon of this universe hence we get a reality that is part of a vast reality. We conclude a result in conjunction to a limited enquiry and that result may not be ultimate one. We do not understand whole reality as we have limited brain ability that is confined to physical parameters. Moreover we do not think in totality that means while thinking about one fact we must have active knowledge behind our mind about whole systems of the universe. Applying this whole knowledge while deriving a result about a fact would create a mental state that would negate the notion , on logical ground, that all phenomena is existed without ‘intent’ or planning. We cannot use double standards as it is unfair. We see every human created artificial phenomenon working precisely with a planned program. We do not

accept any manufacturing as natural as it is nonsense to even think about it. So we have a standard here that tells that every system has a planning behind. So applying this standard to the universal system is logical and justified.

TIME BARRIER:

When Allah says I am Time, He invites human to ponder through Time as to reach a connection with Allah. Time is the Prime medium that connects the human with Allah as all things of universe, known to human, are subject to time flow. Time is a barrier between universe and The Creator. That barrier can only be broken by Human as they have a thought generating device the ‘brain’.

THE REAL-REALITY:

The flow of time can be used to understand the ‘Real Reality’ of us as human. Keeping at the back of mind all universal knowledge that human has acquired and all system working around and then concentrating the flow of time in relation to the Solar System and role of Photons creating day & night would at time open a mind-window that would pull us above mire of time. At that state of mind we would mentally be at the brink of infinity and then applying and conceiving the meaning of related verses of Qur’an about The

Lord as ‘Merciful’, all ‘Adorable’ and ‘The Best of the Creators’ would open those mental locks and knots about refusing and negating The Lord, which are stationed there by accepting unconsciously illogical external thoughts and events without our will. That is a ‘Time Barrier’ related with mental locks which is necessary to be broken to know the ‘Real Reality’ of us as human.

KIND OF CONSCIOUSNESS:

Consciousness is lively state of mind that is reflected physically in conjunction with soul.

Towards understanding ‘the real reality’ we have to evaluate the nature of consciousness, its types and the human consciousness. We observe different level of consciousness among different type of life as insects, birds, animals of different kind. All forms of life are subject to their consciousness and movement and in relation to how human rate them. A germ, a virus, an aunt, a cockroach, a snake, a hen, a peacock, a woodpecker, a hawk, a mouse, a cat, a lion, a camel, a fish and a whale all have specific levels or kind of consciousness to live in one defined parameters subject to their environments.

Since human don’t have any communication with any of these state of consciousnesses we can

presume that they have a consciousness level other than what human possesses.
Expanding this scenario would reveal that human don't have the ultimate consciousness as we don't have any reliable source to confirm the types of consciousness. We can say according to our wisdom that human has the best level as known. Visible and invisible consciousness is term according to human sensing apparatus

Above argument logically proves the limitation of us being able to evaluate a 'reality' above the reality what we conceive. We will rate every reality as ultimate when our consciousness exhausts exploring more. The tracks of our thinking are unlimited because we think it is unlimited. We conclude our thoughts as ultimate truth according to our consciousness and senses. We rate animals as conscious and a tree with some other blend of consciousness. What about an atom? We rate elements as dead because we 'see' them dead.

The purpose of above arguments was to reveal facts about our stature as human and evaluate our span of activity in terms of known physics.

ANTI or PARA TIME:
As earlier described about 'Beyond Infinity' that it might be an 'Anti-Time Phenomenon'. Now the

question arises about the nature of that environment.

- How could we understand that with our imagining limitation?
- How could we describe it as to accomplish a complete diagram of our existence?

Let us examine a hypothesis.

The parameters of that ‘created’ anti-time phenomenon might be as such where ‘creation’ through ‘intent’ takes place normally. That unique parameter of creation takes a course to turn into physical or metaphysical component appearing in our environment. Hence things from nothing appear. In that case the basic components, atom, photons and forces, having unique consciousness, alien to human, must have invisible connections with that phenomenon. Every unit is not only strongly connected with that infinite intent but is being controlled. We cannot assess the intensity, dimensions and magnitude of control of that super natural infinite force of imagination with our tiny mind.

GREAT FEATURES OF HOLY QUR’AN:

One of great features of Holy Qur’an is that it talks with authority about such things that are still unknown to human. It is amazing that Qur’an reminds human that ‘Everything’ in this universe

Bows Down or Prostrates to Allah as everything 'knows' its Creator.

Qur'an (22:18) "Do you not see that everything in the heavens and the earth bows down before Allah? and so do the sun, and the moon and the stars, and the mountain and the trees and the beasts and a large number of the people and even a large number of those who have deserved the torment. And the one whom Allah degrades and disgraces has none to make him worthy of honor; Allah does whatever He wills."

Think over, *"Do You Not See",* What does this mean? It invites human to ponder about other kinds or blends of consciousness. It is a divine statement revealing hidden systems still unknown to human but invites to explore one. So we can assume that life in different parameters and with different conscious level is present around us. Even particle, photon have these attributes but human "Wisdom System' is not able to recognize it yet. Scientists need to address this issue too, but the question is:

Do we have that ability?

In this respect a collective research with Physics and Metaphysics would be a ray of hope.

12: THE UNIVERSAL TRANSCRIPT

B
elow is a brief transcript about creation of the universe, life and human as the Sub- Creator based on Divine hints. We may name it the Universal Transcript as it covers and explains all phenomena in conjunction with scripture Qur'an.

THE PARA-SCIENTIFIC ISLAM:

The natural and Para-Scientific ideology of Islam starts from the 'Cause' of creation of the universe. When according to our standards of understanding an Invisible Infinite Being, beyond human imagination, 'Intended' to be recognized!

UNDERSTANDING ALLAH:

According to Islamic philosophy our Creator ALLAH is known only by His attributes. What words we use to explain him are mere human efforts to understand within our limited parameters of thoughts. Here we can only scientifically explain likewise that, that 'Infinite Being' entails Super Natural Infinite Intelligence and Super Natural Infinite Intent. Allah is above things and if we talk in the parameters of our physical environment then there is nothing like Allah. When we say nothing like him it is just a comparison of two completely unmatchable phenomena. For example if we compare an apple

with a machine we would say that there is no machine like apple! It does not mean that apple is a kind of machine. Hence as long we are talking in terms of our vocabulary we may call ‘Allah’ as ‘HE’.

Allah intended a ‘Super-High-Tech’ ‘environment’ of ‘Existence’. There was nothing then Allah with ‘Infinite Intent’ intended as such that whole universe which was non-existent came into being from nothing. It was based on ‘Light & Things’ *(Time & Space or ‘Photons & Atoms’)* and was classified into *‘visible’ and ‘invisible’*. The well defined and precisely established universal laws began to work. That ‘Intended Universe’ came into ‘existence’ and started its evolution towards programmed end.

As we know the basic bricks from which whole structure of universe made were ‘Atom’ & Photons. (Atom as unit brick of matter & Photon being unit brick of light) The Greatest Creator Allah has an access and control over every atom and photon and that is important to understand the control and grip of Almighty. Laws which were established for physical and non-physical parameters were kept protected as unreachable for human unless allowed.

That Infinite Invisible Being created ‘substances’ (Elements) based on atom having the property to be generated into multiple forms. Then from the best of the ratio of those elements from which the earth was made, one human (Adam) was created and the knowledge of every bit of the universal laws, forces and other matters were transferred to human along with a flare of some ‘Attributes’ of the Mighty Creator. Having those attributes as built in property makes human a true Sub-Creator. HE inserted string of curiosity in the human brain to seek and discover knowledge and to acquire comforts, development, prosperity etc with his ‘Efforts’.

In the universe HE keeps different oceans of knowledge in different phenomenon. We can seek new dimensions and new horizons once we discover a window of mystery that pertains to specific field of knowledge. One example of this is electric current that leads to huge field of modern science. After providing superior knowledge to Human, HE asked all His creatures to bow down to Adam because Adam was then going to be the Viceroy or The Sub-Creator in the world beneath. As Sub-Creator human possess some of the attributes of Allah and is capable of exercising those attributes within an allowed parameter so

much so that human can even manufacture the ‘life of a kind’ like cloning!

A woman (Eve) was created from his rib as his pair. The pair of human was provided with the thoughts, senses, consciousness, emotions and desires. Several built in system in human body were established for human to survive and to increase in numbers from one pair to infinite! The ’Positive’ and the ‘Negative’ parameters were inducted in human emotions. In reality ‘Everything’ basically was formed in ‘pair’. Atom and Photons have pairs in the structure.

Allah created all the souls and asked if He was not the creator and all souls replied in affirmative accepting Him as the Creator. This is the hard wired concept of Creator in our minds.

The working system of this universe is not abrupt. It has invisible and complex SOFTWARE like program that modern science unable to detect. This massive Program contains details of every action taken with respective reactions and its related outcome in respect of Cause & Effect; Effort & Results. It also integrates the physical and spiritual laws. It is preserved in a ‘Book’ called Laoh-e-Mehfooz. (The Preserved Tablet). We may consider it as a huge data bank working under some ‘super natural laws’ still alien to us.

This universe and human are under strict control of this system. It describes matter's behaviour and human developments with respect to human thoughts and actions.

Human actions and reactions; cause and effect in physical and metaphysical environment create complexity and sometime justified reward of particular efforts of a person deferred to far future. Hence it creates a scenario that demands a complete justice for that person who could not get the rightful reward in this life. For that, Allah made Paradise and Hell for an ultimate Justice to be done. Allah says that those who obey and spend life in a rightful manner shall be rewarded with Paradise where they will stay "Forever". Rest will be punished for disobedience. HE as Creator commands Human to 'recognize and obey' HIM.

Animals were created from 'water', Intelligence of different parameters provided for human and animals. To run the system safely as programmed,' invisible' super guards (angels) were deputed for surveillance to secure the system. Knowledge of whole universe that initially was bestowed to human brain was shrunk to almost point zero to grow towards its peak. The evolution of human mind and his

development were co-related with his experiences and efforts. Human were sent on earth to use wisdom to explore hidden laws and beautiful complex systems around to recognize the Real Creator and to praise Him. The more he strives to the more knowledge is recaptured as already hidden in mind. That knowledge is an abstract that resides in human brains and is rediscovered by think and research.

SALIENT FEATURES:

- This is Mega, Super-High-Tech Phenomenon that is programmed for Human to live in as Sub-Creator.
- The thoughts about presence of a Lord as a creator was put inside the brain of Human as a Root file.
- Adam was sent to the earth with Eve.
- Humans are free to choose an action, good or bad.
- Human have a built in mind-system that tells instantly what is wrong or right and this is conscience.
- Allah wanted discipline and obedience, for that ‘messengers’ were sent to teach humans the code of conduct.
- A very forceful ‘devil’ character (Iblees) having immense power to penetrate into

human mind followed human to make them ignorant and disobedient of their Creator.

- Messengers warned humans from mischievous of this devil, ‘Iblees’ or ‘Satan’.
- Time and again human had been provided with different manuals called scripture through special human beings called the Messengers or Prophets.
- Humans were taught about values and rules of living.
- Allah sent many messengers to guide humanity to the right path. Messengers taught human the morals, good and bad, fair and foul.
- The prophets were given books that contained detailed manuals of do and don’ts.
- Every religion that teaches good morals is initially from Allah.
- Times to time new scriptures were sent through new messengers cancelling the previous.
- Thus the Story of Universe, Humanity, Human Curiosity, Human Strives, his success and failure begins from time since then.

Among the chain of scriptures, the second last Holy Book was Bible. After that Allah sent the Last Messenger Mohammad Peace be upon Him and the Final edition of His Holy Book named QUR'AN. Before sending this Book, Allah blessed language Arabic with unusual characteristic. The Arabic language was given immense depth pertaining to its vocabulary as if you choose any three of its alphabet and put them in any desired sequence that will make a word with several meanings! This amazing characteristic made this book alive till date with changing meanings of some of its texts. We may seek guidance pertaining to any age accordingly. Further with exploring new horizons we may seek new meanings. Qur'an is for every age that has its own dimensions, new ideas and new problems.

In general every language changes its shape and style in some hundred year's interval but amazingly this is not the case with Holy Qur'an because Qur'an is a scripture and has an exception in this regard as to remain unchanged till the judgment day.

Allah, as declared, is the custodian of HIS Book. HE is its proven "Custodian" considering the fact that for last 1450 years not a Single word could be changed in Qur'an.

Qur’an invites Human to research and explore hidden mysteries of the universe. Qur’an asks Human to recognize their Creator by exploring the hidden mysteries around. Qur’an invites time and again to think and think deeply. Qur’an pokes the human to activate the brain, to use wisdom. Qur’an tells the making of Heavens and Earth, the Changing of “Day and Night” and the “Phases of the Moon” are the most prominent and easy to examine among many evidences and signs of Allah. Allah wants Human to explore mysteries of His Para-science in the universe as well as inside human body.

In Qur’an, there might be a thing or so that we cannot understand perfectly with our ordinary mind, but time and more knowledge would clear the doubts. Science is a tool which proves the signature of Allah affixed in the Universe for sure. Islam is not against Science. Islam covers whole life whereas science is a part of our life. Science leads us to our Creator. Be reminded that Non-Physical or unseen things are becoming physical with the advancement of our knowledge. The x-ray, radio waves, electromagnetic waves, black holes and other stuff were unknown to us in near past. In future we may discover new frontiers that could change the old philosophies

of science regarding evolution and time & space etc because science concludes with the latest proven discoveries and these are not ultimate and constant but ever changing.

WHO WE ARE:

Now, logically we have come to the conclusion that this universe is no accidental creation but a well planned event. In chapter 3 we discussed human responses as a father, an employee and a citizen in different environment from home to office to country. Now is the time that human should explore his position as inhabitant of this broader environment of Universe. Humans has to realize that like abiding the law of the homeland naturally he has to follow some rules which are necessary as law abiding ‘citizen’ of this universe or as good creature or good servant of the Lord.

While spending our lives we must teach our mind the rules set for our way of life. We must get some mental locks opened and cleared regarding basic question of life and instead of them Positive mind locks should be defined accordingly. That would make us a good servant of The Lord. Following are few points that one should preserve in his subconscious mind.

PROPER MIND LOCKS:

1. We are created by Allah and we are His servant.
2. Allah is the most merciful.
3. Mohammad Peace be upon Him is his last Messenger.
4. Qur'an is the Holy Book from Allah.
5. Commands of Allah are described by the Messenger Peace be upon Him.
6. To obey Allah and to obey Mohammad Peace be upon Him.
7. To believe in Angels, Previous Scriptures and all messengers.
8. Every sinful thought from Satan to be rejected.
9. Every good thought from Allah to follow.
10. Whole life or every bit of time is 'pray' time.
11. Every individual from family to friend and around has rights that we have to fulfill.
12. To fulfill everybody's rights in rightful manner.
13. Our thoughts are not but deeds are counted.
14. The judgment day is logical to come. Be prepared for it.

As for the way of life, our Creator stationed his last Messenger Peace be upon Him for 23 years in this world. During that period the instructions about

different situations in respect of our daily life were sent through revelation. After the death of the Last Messenger Peace be upon Him very strong spiritual era lasted for a long time hence every part of his teachings was preserved in the hearts and minds of the followers. Later on every bit of his deeds, sayings and actions were scientifically collected and recorded. The way of life of Messenger Mohammad Peace be upon Him as registered is known as Hadiths. Since life of the noble Messenger Peace be upon Him was in conjunction with Qur'an therefore Hadiths provide explanation of Qur'anic instructions and commandments. These Hadiths are systematically categorized to be followed accordingly. The Islamic laws are driven through the study of Qur'an and Hadiths.

The flow of time has no specific law or history to reflect a sure future. As per science we cannot know about far future say about 100 years onward. The Hadiths contains many predictions about events to come. Many of the foretelling appeared to be true. Mohammad Peace be upon Him was given knowledge about future to come and that was transferred to us. This proves Hadiths to be true as per classifications. The advocates of physical world do not have any scientific explanation regarding prophecies that exist as facts.

13: CONCLUSION

S
cience failed to give full summary of our beginnings and could not provide facts about us beings alive without an iota of doubt. Atheist scientists and physicist have fault in their ‘physical’ stand. They ought to endeavor find evidences about the missing link of metaphysics inside and around us.

PRISONER OF PHYLOSOPHY:

The previous scriptures which were not sent to confront dynamic scientific assault on human thoughts are naturally helpless against the sheer power of science. Their followers have no choice but to become moderate, liberals and atheist etc and accept science as their leader. The present age knowledgeable scholars are ‘prisoners of philosophy and logic’. They have made their "Mind" as their God. These intellectual, dynamic but confused people are in search of their own reality but unfortunately suffer from superiority complex. Their mistake is that they study Islam with a predetermined mindset and judge through the deeds of common Muslim and by acts of some semi educated that have limited knowledge of

Islam. Islam is not an ordinary religion but a Natural Religion covering the whole universe. All departments of knowledge of this world are part of it including science.

SCIENCE VS SUPEREME-SCIENCE:

Scholars and scientists have created an artificial war between Religion and Science which has no logical ground. Scientists have chosen an opponent that is not an actual opponent. The evolution of human mind is subject to experiences. The issue of difference of ideas between religious scholars and modern scholars started as natural when scholars criticized religious myths which were rejected by new discoveries. Instead of cool and logical exchanges of argument with open mind to accept truths, both took hostile position that changed the issue in a conflict. Since then this era of conflict exists with the same extreme positions from both participants.

History reveals a fact that human always admire intelligent people. Intelligence is all about the activity of our brains. When scientists produce extraordinary achievements, they become more famous and more respected among the lot.

Earlier it was the religious people who were regarded and respected most thereby an element of rivalry prevailed among these two groups. Since scientists and scholars talked with logic they impressed common people alike. An intelligent human mind can think and explore new ideas and opportunities but has no right to act as the leader of all humanity. The religious people were in a close frame of mind and reluctant to accept new ideas. These two groups involved in a fake dispute that never existed.

There is one phenomenon of “Super-Para-Science’ above all that is in full control of every phenomenon present in this whole universe. Due to insufficient knowledge and confined logical approache**s** earlier philosophers were not able to understand religion as representing an invisible parallel Supreme Science or Meta-Science that is present around us. In reality there is no conflict between Religion and Science, in fact it is Science vs. Supreme Science.

Basic difference of ideas is about ‘nature’. Science takes it as for granted with all universal laws. Whereas religion tells this ‘nature’ is nothing but a product itself. Science fails to explain nature as independent ‘mind’ but religion succeeds proving nature as a component of a

Para-Science. Human always use available stuff of the Para-Science as human is also a part of it.

Supreme Science created atom as unit brick to build this universe. Inside the atom there is whole lot of systems working. That brick is self sufficient in surviving as it does not depend upon any outside system. Science is yet to develop any unit brick that is self energy producer like the Atom. The other unit photon travels with high velocity and self sufficient in energy to move too.

REALITY OF HUMAN:

Supreme Science produced Human as a ‘machine of life’ with immense complexity. Its process of formation starts from formation of cells from atoms. It gradually expands from a drop of water then gradually takes different shapes till rise a human being. Each organ is assigned one specific job. All organs are controlled by a unique nervous system. They all are interrelated as such producing balance and coordination in the body. The control room of Brain has unique attributes. It contains consciousness, memory, emotions and ability to make decisions. This body contains an invisible component, soul, which is absorbed or stationed in the body. It talks, sees, hears, chew, swallow, inhale, exhale. The body has connection with outside world for survival. It consumes food

to get energy. It inhales oxygen. This biological machine grows so slowly with such precision that even its own senses can’t detect the ever changing form. This ever-changing ultra high technology is undetectable in every phenomenon whether its time or tree; flower or crops; human or animals; birds or insects; day or night and universe etc. Science has produced (with help of materials of nature) robots and computers but all need external or internal constant supply of energy, in any case, supported from outside likely.

Science is unable to describe how a cell or a bunch of cells (formed by atoms) get life!

What’s that?

- That commands atoms to form cell.
- That tells bunch of cells to form an organ.
- That constructs a harmony among cells of an organ.
- That regulates complete action of one organ.
- That formulates a course of action for an organ.
- That commands all components of body.
- That guides senses to cooperate for any action.
- That creates blood with different groups.

- That fits a camera in eyes.
- That designs finger prints of unique status.
- That knows finger prints of rest of human.
- That draws hand lines different from others.
- That creates emotions from those atoms and cells.
- That creates thoughts.

A scientist, with his span of thoughts, would reply and argue about universal laws responsible for life! Then:

- What's that, that creates universal laws?

And about other form of life:

- Do trees have consciousness?
- What power does tree posses that it grows up by tearing apart the surface of earth against the gravity of the earth?
- Why trees inhale carbon and exhale oxygen?
- Why humans inhale oxygen and exhale carbon?
- What or who creates understanding between human and trees for their survival?
- What tied them in this mutual agreement of survival?
- Why light is helpful for photosynthesis?

- Why earth moves away from sun to form weathers?
- Why we need sleep?
- Where we exist during the sleep?
- Why we dream?

There may be other dozens of questions like these that science cannot satisfy on the pretext of evolution.

Supreme Science developed the solar System for us. Supreme Science is generating immense energy to run whole universe. Supreme Science has created Magnetic, Gravitational, and Atomic Forces. On the other hand human-science has done nothing but exploring, explaining and manipulating Supreme Science or this Meta-scientific phenomenon.

THE CONNECTION:

Religion is a medium that tells about the Creator of that Supreme Science. Religion is a chosen connection of the Mighty Creator with Humans. In fact modern science is just providing material evidences which could be used against scientists and scholars to deny their self made logics against The God. Science is one tool that can be used to verify Creator’s creations and His signature that are affixed on everything visible or invisible. This is the point when atheist scientists

should give up this artificial and useless confrontation with religion. These gentlemen are not in line with religion and they have misguided themselves to have indulged in a useless conflict. Religion has nothing to do with this conflict as it is a mirror reflector that reminds us about Supreme Science all around us. All mental efforts to refuse religion as a major component of this environment are baseless. Nonbelievers are in pursuit of an ultimate excuse on religion to gain authority to deny a God. A 'tiny' part of a 'machine' or a robot cannot overcome the manufacturer. In the environment of 'Supreme Science' there is nothing like 'we do not know'. Everything is precisely defined within the basic parameters of the essential components like physics and metaphysics.

ORGANIZATION:

In our daily life we see a pattern of discipline in our homes, offices, industries or governments. We maintain a skeleton of organization and one head to control. We have a boss at office, a father at home, a president or Chief executive of a state or a government. Without a centralized control no work can be done properly and smoothly. We maintain this as it is a natural law in everyday life. But when we talk about whole mankind we

put aside this law and give ultimate authority to the majority to decide the fate of humanity. We must not ignore this fact as it is also one of the established procedures or 'natural laws'**.** Mankind also needs a boss, a command for the good and bad, true and false, right and wrong.

DESTROYING MORALS:

The social structure of humanity is erected on positive morals and values preached by religion. Free thinking and atheism would ultimately lead to demolish all established morals and decent values that have been told and demonstrated by religion. Uncontrolled thoughts could lead to a free society that would be free of all moral binding and free of family system that are being vastly practiced by human and even by many scientist and scholars who are supporting this thought of directionless freethinking.

ARE WE WISE ENOUGH?

This universal high tech Para-Science dominates us. Do we have the wisdom to recognize it?

Can we, with limited brain ability, ascertain our reality in relation to huge universal phenomena with pure rationalism?

Does our wisdom allow us to accept all natural laws without a lawmaker?

As human we do have wisdom but that is not infinite hence human is not wise enough to establish laws of society and morals.

M-THEORY & CREATION:

See the weakness of scientists in search of a logical explanation of the universe and life. Just to give a logical scientific support to the theory of an accidental or spontaneous creation of the universe modern scientists are trying to 'develop' a unified theory absorbing different theories based on quantum uncertainty, curved space, quarks, strings and multi dimensions. The computing result is 10^{500} universes. Spontaneous creation of our universe is being declared theoretically justified on the pretext of theory of probabilities and says that among billions our universe is a rare and unique case of a perfect universe! Be reminded that it is just a theory yet. As earlier described a justified logic should be universal. With this line of argument that could prove any impossible as possible! How weak this argument is from common sense. Make up your own mind.

- If all universal laws are working in defined line then why not we see a simpler and 'natural' explanation acceptable to common man?

We may conclude here that even a human brain working at the highest level cannot give a clear and decisive solution of the question of our beginnings just because of a false position that scientists have taken about universe as being governed by ‘independent’ physical, natural or universal laws and not from outside.

Scientific Explanation:

In this connection an interesting point is that scientist Hawking explains mathematically that universe can be created from nothing. But with that ‘nothing’, instead of God, he brings ‘Gravity’ in equation as external or internal force.

'Because there is a law like gravity, the universe can and will create itself from nothing.

Islamic Explanation:

That endorses what Qur’an says that there was nothing but Allah. It is the infinite authority of unseen Allah Who can create from nothing. It was that external infinite Intent *not law of gravity* that was the ultimate cause of the creation.

- Be reminded that we are discussing within the parameters of a ‘Created’ phenomenon ‘Existence’. It is easy for Allah to create anything with His intent from outside of this universe that appearing inside this

environment becomes a ‘thing’ from nothing.

One should be realistic in choosing among these two points of view.

Islam accepts and owns modern scientific discoveries as this world is a setup for us with some defined laws & rules to seek knowledge and to understand and obey our Creator through our wisdom.

SUMMARY:

The purpose of this endeavor was to appraise human stature in this universe. Gradually we have come to the conclusion that Qur’an is Divine because a fake scripture cannot survive in presence of hostile opponents of unacceptable ‘human author’. They would tear apart all lies in writing a ‘divine’ book.

We saw that modern scholars have failed to produce any human author of Qur’an. Hence Qur’an is established as scripture**.** Qur’an is divine not only because we do not find any human author but moreover Qur’an contains such scientific information that was impossible for that generation of human to collect and induct. During our analysis it is revealed that Qur’an contains divine hints about whole universal system and origin of human as dignified. Qur’an sanctions

the stature of Human as distinguished Sub Creator not as a monkey!

Qur'an emphasizes human to think and understand his reality as creature and servant as that opens doors to rational behaviours. Life is not a joke to live any manner we like. What we analyzed in previous pages reveals great flaws of modern philosophy of life. Hence, logically, it doesn't qualify to be accepted as the ultimate human choice.

Logically as per their stance Modern philosophy has declared human as supreme authority to derive laws based on democracy. Confused philosophy leads to confused thoughts and harmful indiscipline actions. If we detach ourselves from natural course of obeying divine command then outcome would be destruction of our established values and family system. Examples are spread over in Western Society based on secularism and freedom of action where homosexuality got legal shelter. Man can marry man! What next? It is just the beginning towards a directionless social system where morals would perish and values would change upside down resulting total collapse of natural human values. Following this course of life would lead to such drop of moral values as gradually human would

ignore respected relations and the evil motives would prevail and would be adapted as legitimate through ‘democracy’. It is mutiny against a set natural system. Human who cannot hold his breath for a minute talks so high, how ridiculous! For democracy we see a double standard too. Logic should be universal and should be applied honestly in every department but unfortunately that we do not see when we talk about the Creator of universe! Majority of human believe in God but modern philosophies don’t! They should follow the majority.

Qur’an tells our logical Beginning, logical Present and logical End with discipline & justice. Modern theory declares human as a bubble in the water that emerges as an accident and then perishes for good. It generates artificial brotherhood of ‘mankind’ with no solid philosophy to respect others emotions but leads to selfishness for own prosperity as it lacks related justice system. Tussle of good and bad, fair and foul is a natural course. Modern philosophy that consists of secularism, democracy, freedom of thoughts and freedom of actions is based on idealism with weak foundation. It has no justified defined end but

doubtful future with multiple and diverse inspirations.

In fact Religion and Science both are somehow at the same page in respect of God! Scientific explanations ultimately declare “Physical Laws’ as the compassionate, omnipotent, ever present, having overwhelming grip on human and universe like ‘god”! But here science stops and doesn’t give further explanation of origin of these physical or scientific laws. Science starts its expedition presuming these laws as ever present.

In this respect what religion Islam describes is one step ahead of science. Islam tells that this universe and life are meta-scientific products under strict control of natural laws. Islam doesn’t put human in any confusion about God and explains why human cannot understand God. Islamic wisdom sails through critical philosophies of life with ease when explaining to understand The God. It satisfies every individual for every question.

Islam not only endorses scientific discoveries but it climbs one step ahead of scientific philosophy and produces answer of unresolved question about the origin of physical laws as created by an infinite Unseen Being which has a physical connection(through Qur’an) with human.

Here we may ascertain superiority of Islam over modern scientific philosophy on logical ground.

Here we have fulfilled age old demand of producing physical evidence of The God. Islam provides a vital physical connection between Physics and metaphysics. It holds a sound argument pertaining to the author of Qur'an. Qur'an belongs to physical phenomenon whereas the author of Qur'an belongs to metaphysical phenomenon. As per accepted universal or physical law no book can be written without an author. Hence Qur'an becomes the ONLY Physical Connection available that holds both phenomena together. In fact Islam holds the opinion about Quran as the reflections of attributes of Allah swt.

We observed that science is unable:

- To find origin of Thoughts.
- To discover the source of forces in atom.
- To discover the origin of forces in the universe.
- To find reason of aging.
- To detect any connection between desire and action.
- To understand a Supreme Science present all around.

- To describe why photon travel with high velocity.

We have come to the conclusion that modern scholars and scientists are confused by the scintillating dynamics of universal metaphysics. But their untiring efforts must be appreciated as they are chasing metaphysics and keep on converting and describing that into physical phenomenon.

We have also evaluated the cause of scientists' arrogant attitude considering them as superior but nevertheless they are prisoner of time and physics. We discussed one amazing phenomenon of 'time' and its impact on human thoughts as human is confined and compelled to think within physical parameters and scientists and scholars are no exception. Science and Religion are involved in philosophical fights within this time bound physical phenomena whereas the TRUTH lies beyond physics.

Disperse Scientific Opinions:

One main weakness of modern scientific philosophies is lack of one uniform or central policy based on logic like religion has. Every scientist has his own view point. Since modern philosophies are in conjunction with scientific theories it ceased to be ultimate as theories are changeable. With dispersed thoughts and

multiple viewpoints philosophies based on human wisdom are mere subjects of study and not anymore.

Any human or group of human how much knowledge they posses cannot predict future outcome, hence cannot design any social contract for future to come. Divine guidance that taught morals, values and social code of conduct is proven channel guiding humanity to respectful and responsible way of life.

. Qur'an describes scientific way of establishing and running this system like human do. Allah created above human imagination a phenomenon like 'Control Room', (Arsh) from where Allah administers with his intent.

Qur'an (36:82-83) "When He intends anything, He needs only say: 'Be', and it is. Glorified is He in Whose hand is the absolute control of everything, and to Him you shall all be returned."

This is the infinite power of intent and imagination of Allah, which we can scientifically describe like, The Super Natural Infinite Intelligence.

We may visualize this phenomenon of the universe as a 'Serious Setup' designed for human. Beware!

- The whole chronicle of human evolution, progress, relations and prosperity all are in conjunction with human thoughts and related actions and behaviours. The core point of mystery about our ‘reality’ lies where our Thoughts Grow and Appear.
- Why a thought appears? What is the connection between neurons and ‘human mind’?

Here role of Soul is highly important.

SOMETHING TO PONDER:

This is scientific fact that everything is made of Atoms. Just look around from fingertip of human to hairs, from nail to teeth, from flowers to trees, from dust to clouds, from earth to sun, from mountains to galaxies, from rivers to oceans, from cliff to rainbow and from insects to birds to animals not a single thing or living being has an exception.

Now analyze this scientific stand about the ‘system’ of the universe that:

‘This is a system without planning!’

We see many atheist scholars arguing about it. It needs to be tested with rationalism and commonsense. Just evaluate the huge and highly sophisticated mechanisms of creation from the bricks of atoms that contain not only matters and

living bodies but consciousness, thoughts and emotions too. Imagine the magnitude of this creation and apply the wisdom. What commonsense says?

How many systems without planning are possible? One or two or billions of billion! Think over it.

KNOWLEDGE:

As stated earlier Human being lives and swim in the ocean of mysteries to explore new dimensions but still unable to find its coast. As long human is confined to this environment he would only understand to the extent of his endeavors. Qur'an invites time and again to think and think. By acquiring knowledge human do what they are supposed to do; think and think. Hence human, through science, is not doing anything spectacular itself but doing what human is supposed to do and that is 'Moving' towards the Lord, Allah by thinking and exploring.

Qur'an contains a dynamic statement about a reality in relation to our span of thoughts and imagination, as mentioned here.

Qur'an: (As-Sajdah 32:17) "No person knows what is kept hidden for them, of joy as a reward for what they used to do." Hadith Qudsi 37:

On the authority of Abu Hurayrah (may Allah be pleased with him), who said that the Messenger Peace be upon Him of Allah communicated that Allah said:

`I have prepared for my righteous slaves what no eye has seen, no ear has heard, and the mind of no man has conceived.'

Above sentence '...the mind of no man has conceived' tells the reality behind the scene of this "Existence". There is a world hidden from our eyes, ears and even beyond our mental approach. It clearly reminds us the limitation of our senses.

THE 'GRAND' SURRENDER:

In future modern scientists and scholars, who are in search of ultimate truth about universe and life, but support atheism, would certainly find some critical links that would prove metaphysics leading to the Creator Allah as physical.

That discovery would endorse the total Surrender of human, 'The Rebel Viceroy', of this beautifully created universe as authoritatively predicted in Qur'an.

Al Qur'an: (41:53) "We will show them Our portents in the Universe and within themselves, until it will become vividly clear to them that it is the truth. Is it not

sufficient as regards your Lord that He is a witness over all?”

Until then we wait as till could break their shell of an inflexible stand about it.

***

“In the Name of Allah The Most Compassionate,
The Most Merciful.”

“By the Time!
Man is surely in loss,
except those who believed and did good works,
and exhorted one another to Truth,
and exhorted one another to patience.”
Qur’an: (103:1-3)

**

Allah’s Messenger *Peace be upon Him*,
Relates to us that
Allah says:
“The son of Adam offends Me
when he curses time,
For I am time.
In My hand is the affair.
I alternate the night and the day.”
{*Sahîh al-Bukhârî* (4826) and *Sahîh Muslim* (2246)}
